

#### ART MEETS SCIENCE

The best tools ensure the best results. We've invested in industry leading technology, giving DiamondCast® a distinct edge over any other material on the market. A Statemix VM-1000 Vortex Mixer guarantees we get a complete mix of resin and colorant (without introducing any air bubbles) while our lab grade CascadeTek oven is used to cure each batch to perfection. After mixing, each batch is hand poured into molds, resulting in unique patterns and swirls in each piece. This combination of cutting edge technology and hand pouring technique guarantees that you'll have void free material that will always be one of a kind.

#### A MATERIAL UNLIKE ANY OTHER

DiamondCast® is crafted with premium urethane, real diamond, and only the finest liquid and powder pigments on the market. Our patent pending resin material is designed to bring your work to life through superior depth of color and beauty of natural diamond.
