

SCARPA®

INSTRUCTIONS

1. Measure your feet while wearing the socks for your intended use. For best results measure on a hard floor surface (not carpet).
2. Print this page at 100% size on 8.5" x 11" paper, portrait orientation.
DO NOT SCALE
3. Fold sheet up along the dotted line in the lower right corner
4. Place folded edge against and parallel to a wall. The measurement scale should be perpendicular to the wall. Tape to floor.
5. Stand on the paper with the back of your heel lightly touching the wall.
6. Look for your nearest Euro size or Mondo size (ski boots only) at the end of your longest toe. Measure both feet and if there is a difference, go with the longer of the two sizes.
7. If you have a wide forefoot, upsizing 1/2 to 1 size may help accommodate this.

All SCARPA non plastic footwear uses European sizing.
 1 Euro whole size = 6.6mm = 0.26 inches
 1 US whole size = 8.4mm = 0.33 inches

The smaller increments of the Euro size scale will result in a more precise fit.

FIT GUIDE

CLIMBING

For climbing shoes you may want to downsize from measured shoe size by 1/2 to 2 sizes depending on personal preference and intended use.

MOUNTAIN

For mountain boots, you may want to upsize 1/2+ sizes depending upon fit preference. Note that the SCARPA Inverno is on the UK size scale, so take your Men's US size and subtract 1 or Women's US size and subtract 2.

SKI

SCARPA Ski boots are in Mondo sizing and break on the half size, meaning a 26.5 and a 27.0 Mondo share the same size shell. Some skiers may want to downsize up to 1 full mondo size depending upon personal fit preference. In between sizes? Size down if you have a narrow or low volume foot, and size up if you have a wider, high volume foot.

Place credit card here to check for correct print scale. The outline should match the size of your card.

Or measure across this shape and confirm that the left and right edges are 84.6mm apart.

Fold along dotted line and align folded edge against and parallel to a wall
