

HYPERSENSITIVITY

It is a well known fact that certain individuals, for undetermined reasons, may be allergic or hypersensitive to foods, drugs, cosmetics or any other substances or materials that are harmless to most people. The relatively few people who are subject to such reactions are said to be allergic or hypersensitive.

PERFORM A SKIN SENSITIVITY TEST 48 HOURS BEFORE EVERY APPLICATION.

To ascertain whether you are hypersensitive or allergic to this product you must make this skin sensitivity test 48 hours before application.

1. Prepare the test mixture by mixing a small quantity as directed.
2. Apply a few drops of the mixture to a previously washed area the size of a small coin on the inner fold of the elbow.
3. Allow the test area to dry and leave uncovered and undisturbed for 48 hours. During or immediately after the 48 hour period, if any burning, swelling, redness or irritation shows in or around the area, then it must be assumed that you are allergic to the product and must not use it.

This product must not be applied to the lashes or hair if the skin nearby shows evidence of any abrasion or soreness.

WARNING:

This product contains ingredients which may cause an allergic reaction, which in rare cases may be severe.

Please read the instructions carefully and always perform a skin sensitivity test before applying to your eyelashes and eyebrows.

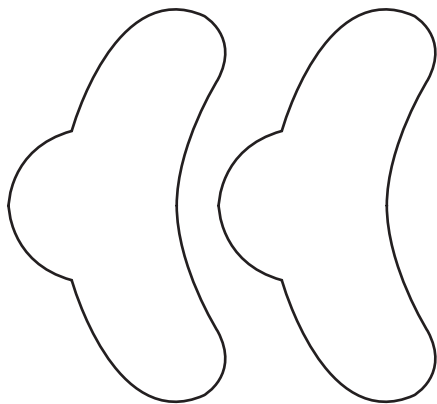

SAFETY DIRECTIONS:

- Do not use if you have ever experienced any allergic reaction to a hair colourant.
- Do not use if your eyes are currently sore, irritated or if the skin around the eyes is broken.
- Do not use on eyebrows that have been plucked and/or waxed during the last 72 hours.
- Perform a skin sensitivity test 48 hours before dyeing your lashes or brows.
- Developer liquid contains hydrogen peroxide.
- Avoid contact with the eyes. If product gets into the eyes, rinse immediately with cold running water. If irritation persists seek medical advice.
- Wear suitable gloves.
- Not to be taken internally.

KEEP OUT OF REACH FROM CHILDREN

Replacement eye protection shapes

Eye protection papers are included in the kit but if you run out just use paper toweling and trace out two eye-pads and cut to shape as traced.

Lash & Brow Dye Kit

AU - Chemcorp Pty Ltd
7 Box Road Taren Point
NSW 2229 Australia
Ph: +61 2 9526 0777
E: info@chemcorp.com.au
www.chemcorp.com.au

Things you need:

1. Dish of cold tap water
2. Petroleum jelly (Vaseline)
3. Cotton wool balls
4. Cotton buds

PREPARE INSTRUCTIONS

Prepare eye and brow area

1. Make sure lashes and brows are completely clean by removing natural oils as well as make up with a non-oily cleanser.
2. **Lashes:** Take two eye protection papers and put some Vaseline on one side of the eye protection papers. Press the papers right up under the eye and adhere to the skin as close as possible to the bottom lashes. (See diagram below)
3. **Brows:** Apply Vaseline with a cotton bud on the skin around the brow to protect it from coming in contact with the dye.
4. Squeeze into the mixing cup about 2.5cm (1") of colour cream. Add ten drops of the developer liquid and mix together well using the white wand provided.

Use the white wand to mix the colour cream and developer liquid together. You can use the white wand to apply the eyelash/brow mixture or alternatively, you can use the mascara-style wand included to apply mixture.

INSTRUCTIONS

When applying to someone else.

5. In a lying down position with eyes closed (must be kept closed for next 12-15 minutes) apply to the lashes using the white wand or the mascara-style wand in the same manner as applying mascara, i.e. upward strokes catching bottom lashes and the tips of the top lashes. Now do downward strokes to the top lashes.
6. With eyes still closed leave on for ten minutes. Avoid opening eyes as this may cause irritation.
7. With eyes still closed use dampened cotton wool balls to remove any residual mixture. Use downward strokes first then use upward strokes.
8. Remove pads and eyes can now be opened. Using dampened cotton buds remove Vaseline and any residual mixture. Slight stinging may occur which is a normal reaction, if it persists for more than one minute flush with an eye bath of cold tap water.

BROWS

For colouring brows and other hair follow the same instructions leaving the mixture on for about 6 minutes, and removing it using only dampened cotton wool.

INSTRUCTIONS

When applying to yourself.

4. Apply to the lashes using the white wand or the mascara-style wand as if you were applying normal mascara and leave on for ten minutes.
5. Using a slightly dampened cotton bud remove most of the mixture with gentle strokes away from the eye. Close your eyes and now use slightly dampened cotton wool to remove the remainder. Slight stinging may occur which is a normal reaction. If it persists for more than one minute flush with an eye bath of cold tap water.

IMPORTANT

Avoid getting mixture into the eyes. If this occurs, immediately flush with cold tap water.

If you are using the same colour for lashes and brows, then you can use the same applicator wand. If you decide to have a lighter colour for the brows, you need to use a new mixing cup (or clean it) and a new applicator wand.
