

# ALLURE COLLECTION

## CHARACTERISTICS:

Allure is a classic pull-up leather. Treated with heat-reactive aniline dyes, its rich waxy finish will develop a patina with use, revealing the natural beauty of the hide. It perfectly blends old world tradition with modern technology and aesthetics.

## ALLURE COLLECTION

### CARE & CLEANING:

Leather is a luxurious, durable material that will maintain its beauty for many years with proper care. Aniline leathers are tanned and dyed without added finishes or protection and develop a beautiful patina with use.

Allure should be dusted regularly with a soft cloth or vacuumed with a soft bristle attachment. Remove spilled liquids by dabbing with a clean cloth (do not rub). For difficult stains, it is always best to contact a specialist as damage may occur due to improper cleaning.

For optimum performance and longevity, do not place your leather furniture within twelve inches of a heating source or in sustained direct sunlight.

---

### HIDE DIAGRAM:

#### A NOTE ON ANILINE LEATHERS:

Full aniline leathers display all of the natural beauty of the hide, including neck wrinkles, stretch marks, spines, insect bites, and scars. As with stained natural hardwoods, leather shows shading variation in and between hides. These characteristics are part of the leather's beauty and are not considered defects.

To determine the most appropriate leather for your unique application please call us at 212.736.3360. We love to talk about leather!
