

FIRE FIGHTER ANT KILLER

CONTROL FIRE ANTS

OUTDOOR USE ONLY

CONTAINS CONSERVE INSECTICIDE

DIRECTIONS

Apply when ants are active (usually when temperatures are warmer than 60F). The best time to apply is in the cooler early morning or late evening hours when fire ants and harvester and foraging is at its peak. Mounds will usually be eliminated or destroyed in 3 to 14 days after treatment. Extremely large mounds may require a repeat application. Make a broadcast application every other month during the warm months to keep fire ants or harvester ant from establishing, starting, or forming new mounds.

HOW TO APPLY

Mound Application: Sprinkle bait evenly over and around each mound in a 4ft diameter circle. Apply gently to avoid disturbing ants.

Broadcast Application: Spread bait evenly over the infested area with a hand held or ground driven rotary broadcast spreader.

HOW MUCH TO APPLY

Mound Application: Use 4 Tbs (tablespoons) for each mound. For mounds greater than 15 inches in diameter, use 6 Tbs per mound.

Broadcast Application: Use 1/3 to 2/3 cup for each 1,000 sq. ft, or 3 to 6 cups per 10,000 sq ft., or 2.5 to 5 lbs. per acre. Use higher rates for heavier infestation, faster activity, and greater overall control.
