**Installation**

1. Fix the OLED on the rack with nut and stick the OLED sticker.

2. Fix the power switch with the nut.

3. Assemble the HDMI adapter and PoE HAT, and plug in the SD card adapter.
4. Align the holes and insert RPi into the rack.

5. Fix with screws.

NOTE

The OLED display will turn on automatically and read the stats (CPU/Memory load, IP address, temperature, etc.) as soon as Raspbian’s booted up, you can also program it to show something else.
