Universal Motor & Syringe Clip

General Information:
Sold in packs of 10 these Universal Motor & Syringe Clips come as a two part moulding. The large clip component (A) can be used in isolation to hold motors and 20mm syringes. With the ‘C’ clamp component (B) added, the clip will hold the smaller flat-sided motor.

Fixing:
To hold the medium motor (MM18) or larger motor (MM28) securely, simply slide into the large clip component (A). This moulded component is made to lightly grip the sides of the round motor casing, holding it firmly in place (Fig. 1).
To secure the smaller flat-sided motor (MM10), slide it into the inner ‘C’ clamp (B) first and then into the larger clip component (Fig. 2).

Medium Motor (MM18 type)  Large Motor (MM28 type)
(Fig. 1)

Small Flat-Sided Motor (MM10 type) (Fig. 2)

20mm Syringe (Fig. 3)
20mm Syringes can also be held firmly in place but because they are of a slightly smaller diameter they will require to be bound with masking tape to increase their diameter first (Fig. 3).

Underneath, it has a sticky pad in place which can be used to provide a good fixing to any flat surface and 4x 2.5mm holes to provide a means for physical fixing if required.

Remove film to reveal sticky surface

Tip: Add an elastic band around the top edges of the clip if you need a tighter grip

Actual size of base

Elastic band (not included)
