

Volae

KS Gizmo

Kickstand Adapter Plate

The KS Gizmo kickstand adapter plate is designed to work with the Greenfield Bottom Bracket 305mm Kickstand (not included).

The KS Gizmo will allow you to attach the Greenfield Bottom Bracket Kickstand (305mm version) to any Volae recumbent, as well as Vision, Burley and Lightning recumbents. (Not recommended for use on tandems.)

To mount your Gizmo:

- 1. Check your parts (Figure 1).** You should have a kickstand Gizmo plate, one 5x16mm SS bolt and 5 mm washer, and one 3/8" - 16 x 1" bolt and lockwasher.
- 2. Attach the kickstand to the Gizmo (Figure 2).** Remove the bolt washer and upper plate from the kickstand. Set aside the long bolt and upper plate, and attach the kickstand to the plate using the lock-washer and the 3/8" bolt we provide. Tighten securely.
- 3. Attach the Gizmo to the frame (Figure 2).** Remove the rear quick release skewer from the bike. If you do not feel comfortable with the operation of quick release units, see your local bike shop. **DO NOT** remove the wheel! Thread the skewer through the Gizmo and into the axle on the left dropout. Line up the threaded hole in the dropout with the appropriate hole in the Gizmo and loosely install the 5 x 16mm SS bolt and washer through the Gizmo into the threaded hole in the dropout.
- 4. Tighten everything (Figure 3).** Tighten the quick release skewer first, and then tighten the 5mm bolt.

Racks and fender struts should be installed outboard of the Gizmo, using the 5mm bolt. You might need to use a longer 5mm bolt than the one supplied.
