

We were so excited to get you this charging station we forgot one step! As one of the first to have our new design, you'll need to complete cord setup inside our unit. This was not designed as our intention and future models it will be properly installed. Thanks

1. Remove watch shelf, USB face plate and USB charger unit.
2. Guide USB charger unit cord through small hole at the bottom, so it cross through laptop compartment and out the back hinged area, where a 6 outlet powerstrip can (optionally) be stored.
3. Affix power unit back in place with faceplate and set up your cords.
4. Place watch shelf ontop and you are ready to go!
