

## Suitcase Storage - Assembly Instruction

- Remove packaging.
- Locate & remove the kit bag containing the fittings.
- Place the divan face down to gain access to the sockets underneath.
- In each corner and the centre you will see a metal socket. Place the glide/castors into the sockets and apply force.
- **For split divans:**
  - Place both halves together making sure they line up, ensuring the square corners go together.
  - There will be two gaps of loose fabric on the underside where the two halves meet, one at each end of the divan.
  - Once the gaps have been located, using the U-shaped clips provided (pictures below), clip the divans together.
- Once all the castors/glides and linking clips are attached, stand the divan upright onto the castors/glides.
- Divans will have headboard holes at both the head & foot end making the product universal, these are marked with 'Insert Here' stickers. Only pierce the fabric at the end you wish to attach your headboard.
