

### The Brass Pepper Mill Company

The Brass Pepper Mills company was established in Thessaloniki, Northern Greece, in 1977 by a partnership of mechanical engineers with the aim of producing high quality mills. Current owner, Polivios Ioannou, is the son of one of the company founders and has been working in the family business since he was young. The design of the mills is based on a coffee mill created in the early 1900's for Greek soldiers to use in the field. All mills are manufactured in a single factory/workshop in Thessaloniki. Part handmade and part machine fabricated, each mill is thoroughly quality controlled in this small-scale family business production environment. The mills are produced from high quality materials with a fine detailed finish while being robust and practical for day-to-day use. With a growing reputation for the quality of its products, the Brass Pepper Mill company now exports its mills to a growing market around the world. Mr Kitly is proud to be the exclusive distributor of these mills in Australia.

#### The mills

A range of mills are available in varying material finishes, sizes and styles for grinding pepper and dry spices, salt and coffee. Depending on the style, the mill will have a rotating top, or handle for manual grinding. All mills listed as Pepper mills are made for pepper, but can also grind dry spices. The pepper mills have an all-metal internal grinding mechanism while salt mills have a plastic mechanism given the corrosive effect of salt. The mechanism in each mill may be adjusted for a courser or finer grind by turning a screw at its base. Coffee mills come with a closed cup at their base to collect ground coffee and have a bigger mechanism since coffee beans are usually bigger in size.

#### Care

All metals will oxidise (darken) with touch and with use. This patina of use is part of the nature of the metal and brings with it a beautiful patina of use. However, ordinary metal cleaners may be used with a soft cloth to polish the outside of the mill and maintain an as-new, bright polished finish. The mills should never be washed in water as this will corrode the mechanism. Brass mills are slightly more resistant to oxidation. Pepper mills 402, 403, 404, 412, 413 and 414 are lacquered. This laquering provides a barrier to the oxidisation process. No salt mills are lacquered since salt oxidises the lacquer coating.

# Product quality

Mills produced by the Brass Pepper Mill company are a tried and tested product that have been in the market for almost 40 years. They consistently receive positive reviews for use and durability. The maker provides a 5 year guarantee for salt mills and 10 year guarantee for all other mills.

## Wholesale orders

Please contact us at Mr Kitly for further product information and to obtain our current wholesale pricelist. Wholesale sales are available to retailers interested in stocking our range of mills subject to our wholesale terms and conditions.
