Report Comments

Samples were received by Analytica Laboratories in acceptable condition unless otherwise noted on this report.

Amended report. Reported values are the average of two separate determinations.

Results Summary

3in1 Honey Analysis

Laboratory ID	Sample ID	Dihydroxyacetone DHA	Methylglyoxal MG	Non-peroxide Activity NPA*	Hydroxymethylfurfural HMF
		<i>Units</i> mg/kg <i>Reporting Limit</i>	mg/kg	%w/v phenol eq. 0.8	mg/kg 1
17-09491-1	FNB15 - Batch 20	1,340	505	14.8	12

3in1 Honey Analysis Approver:

Jacob Jaine, Ph.D.
Senior Technologist

Method Summary

3in1 Determination of Dihydroxyacetone (DHA), Methylglyoxal (MG) and Hydroxymethylfurfural (HMF) by aqueous extraction, derivatisation, and UPLC analysis.

NPA Non-Peroxide Activity (NPA) values are not directly measured by the laboratory, but are calculated from the measured methylglyoxal concentration in the honey according to the requirements of the client. The calculation is based on published data^(†) comparing the NPA and methylglyoxal concentration measured in a range of honey samples. These calculated values are not accredited by IANZ and do not imply that the honey is or is not manuka honey. NPA values less than 5 are an estimate based on extrapolation of the relationship between methylglyoxal and NPA
