Step 1

Shut off cold water supply

Step 2

Locate an easily accessible section of tubing between shut off and refrigerator.

Step 3

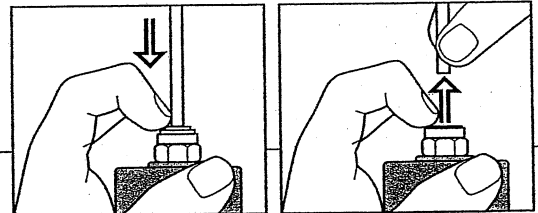

Cut tubing using a tube cutter - smooth out cut edges with a file or steel wool.

NOTE: Install unit with directional arrow in line with water flow.

Step 4

Insert supply side tubing (1/4" copper or plastic tube) into supply side end of filter. Push firmly until tubing bottoms out.

TURN WATER OFF

Step 5

Turn water supply on, hold filter over bucket and flush until water runs clear.

Step 6

Repeat step 4 on the refrigerator side making sure you bottom out the tubing.

Step 7

Turn water supply on and check for any leaks.
