Enterprise Security Names Kanguru Among Top Ten Encryption Solution Providers

 Millis, MA, USA – January 9, 2018 – Kanguru has been named among the **Top Ten Encryption Solution Providers by Enterprise Security Magazine** for 2018. Kanguru Solutions is an industry leader easing the information security concerns of organizations around the world with unparalleled data encryption products. Kanguru offers complete military grade USB data protection with FIPS Certified, AES 256-Bit hardware encrypted drives that can be remotely managed and configured by administrators around the globe.

As a U.S. based, leading manufacturer of high-quality, FIPS 140-2 Certified, hardware encrypted USB data storage drives, **Kanguru Defender**® secure USB can be configured and deployed to maintain the highest level of security. In addition, Kanguru provides a fully-integrated solution with its enterprise-level remote management console for administrators. **Kanguru Remote Management Console (KRMC™)** is a

robust centralized management solution that enables organizations to monitor, manage, and report on their deployed Kanguru Defender USB encrypted flash drives, hard drives and SSDs from one convenient console. There is even an option to remotely wipe / disable drives or change all passwords immediately in the event they are ever lost or stolen. KRMC is offered as a cloud-based option or can be configured on a self-hosted customer server.

"Arriving early in the scene providing flash drives in the U.S., Kanguru's highly secure, military-grade data security solutions and services for cost-effective data protection have become highly sought after today," states Enterprise Security Magazine.

Security-conscious organizations around the world trust Kanguru's encryption products to secure their data and meet industry regulations. Standards in healthcare such as HIPAA, and other data security governance are met with Kanguru's robust, easy-to-use solutions.
