

Kanguru Remote Management Console™ (KRMC)

Advanced Package - On-Premise Edition

Kanguru Remote Management Console™ (KRMC)™ is a powerful security application designed for remotely managing Kanguru Defender® hardware encrypted data storage devices. With the KRMC-Hosted **Advanced Package**, an Administrator or Data Security Officer can monitor a variety of security aspects for Kanguru Defender encrypted devices belonging to their organization, creating a highly-secure data environment.

The Advanced Package includes:

- **All Standard Package Features:**
 - Remotely Enable & Disable Lost or Stolen Drives
 - Strong Password Management
 - Access Control Restrictions
 - SSPM (Self Service Password Management)
- **Advanced Package Features:**
 - Secondary Administrative Accounts
 - Auditor Accounts
 - Device Groups
 - Single Sign-On (Via SAML)
 - Connection to a SIEM Server for Event Monitoring

Additional Features of the Advanced Package:

Device Grouping and Multiple Administrators

The Administrator can manage devices by placing them into groups. Groups can be configured independently from the global set, allowing custom settings for each group. This account also allows the Administrator to assign multiple administrators to manage each group. As the Super-Administrator, permissions can be configured for each administrator.

Event Generation

The Super-Administrator can view an event stream of the entire device fleet and multiple administrators. Receive updates for logins, logouts, failed attempts, and know when devices are added to the account.

Connection to SIEM Server

Administrators can keep track of all devices in the centralized logging server. KRMC supports Splunk, Graylog, Syslog. More are in

development. Event timelines are ideal for auditing and event timelines.

Single Sign On (SSO)

Use your existing single sign on capabilities from your business, we support Okta, Azure, Duo, any SAML 2.0 provider with ease.

Practical Use Case

A KRMC-Hosted ADVANCED Account is ideal for organizations that require a high-level of security along with certain network integrations, but may not necessarily be required to meet heavy regulations. Organizations such as Education or Research, Large Business, Enterprise and Corporate may benefit best with the ADVANCED Account security features.

Available in 1, 2, and 3-Year Packages.
