

YOUR PROFILE

Aging . Oily . Breakouts

DERMALDIAGNOSIS™

Your Profile

Your AOB skin type is very common and is characterized by inflammation manifested as redness, pimples, and acne breakouts. The inflammation leads to an increased risk of skin aging, making it mandatory for you to use anti-inflammatory and antioxidant ingredients.

Your skin type often has large pores and may feel shiny during the day. You experience congested pores in the form of blackheads and whiteheads and maybe even acne breakouts.

Consistent everyday use of the correct products will correct and prevent premature aging, clear and prevent clogged pores leading to breakouts, and reduce your skin's tendency for inflammation.

Treatment Objectives

1	Regulate sebum production and unclog pores.
2	Reduce and eliminate acne breakouts.
3	Reduce inflammation & bacterial activity.
4	Prevent and correct premature skin aging including lines and wrinkles.

Your Frustrations

- Breakouts, clogged pores & inflamed skin.
- Premature skin aging.
- Oily & shiny skin with enlarged pores.
- Sensitive skin that reacts to various stimuli and products.

Your Goals

- No sensitivity reactions, breakouts or inflammation.
- Regulated skin sebum (oil) levels with clean pores.
- Prevention and correction of premature skin aging including lines and wrinkles.

Your Treatment Regimen

AM.

CLEANSER	1. Pore Control Cleanser
REPAIR	2. Infracin serum
HYDRATE & PROTECT	3. DermDefence SPF 50

PM.

1. Pore Control Cleanser
2. Retinol serum
3. Salicylic gel

SCAN HERE

- Apply Salicylic gel on areas with breakouts and clogged pores 2 - 3 times per week. Salicylic gel causes mild skin peeling. When breakouts and congested pores have cleared up, discontinue use and apply again during periods when you struggle with breakouts or clogged pores.
- Apply Retinol serum every night, except for the nights you apply Salicylic gel.

YOUR TREATMENT PLAN

Aging . Oily . Breakouts

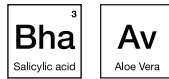

CODE: AOB

DERMEXCEL™

Cleanse

PORE CONTROL CLEANSER

A soothing cleanser that will control and regulate the skin's oil production and dislodge sebum plugs from pores. Salicylic acid has an anti-inflammatory and skin calming action in reducing irritation and redness. It will clean skin from resistant congestion and will provide anti-bacterial action.

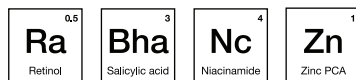

Apply on dry skin. If you apply your cleanser to dry skin, you are able to circulate the cleanser over your eyes without burning or stinging.

Keep the cleanser on your skin for 3 min or longer.

Repair

INFLACIN SERUM

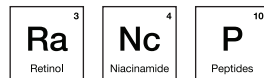

A retinoid-based serum with potent anti-inflammatory and acne-fighting ingredients. Inflammacin will regulate sebum (oil) production, one of the significant contributors to congested pores and acne breakouts.

Apply in the morning on clean and dry skin before any other product.

Skin must be dry. Water will alter the pH rendering the product less effective.

RETINOL SERUM

Retinol has a phenomenal restorative influence on the skin. It prevents and corrects signs of aging on cellular level by stimulating collagen production and by preventing degradation of collagen and elastin. Retinol normalize the natural shedding of dead skin cells within your pores, therefore preventing dead cells from clogging your pores.

Apply in the evening on clean and dry skin before any other product.

For quick and deep absorption, apply serum to damp skin after cleansing. Moist skin is more permeable than dry skin.

Renew

SALICYLIC GEL

This treatment consists of an optimal dose of medicated Salicylic acid with anti-inflammatory and cell resurfacing properties. It will help unclog congested pores effectively, inhibit acne-causing bacteria, and reduce inflammation associated with acne, breakouts, and pigmentation.

Apply in the evening on clean and dry skin.

Leave on during the night and rinse off in the morning.

Hydrate & Protect

DERMDEFENCE SPF 50

A revolutionary sunscreen that combines very high UV protection with cellular and DNA protection. DERMDEFENCE SPF 50 goes beyond UV protection to defend against harmful infrared rays and blue light while supporting the skin's ability to restore itself.

Apply every morning.

During extensive sun exposure, reapply as needed.
