

SUSTAINABLE GROWTH AND DEVELOPMENT IN VIEW OF THE AGENDA FOR 2030

Kartell is continuing down the road begun by the "Kartell loves the planet" manifesto and drafting a company sustainability policy covering 11 of the 17 Sustainable Development Goals (SDGs) established by the United Nations as a "blueprint to achieve a better and more sustainable future for all".

Kartell has identified the SDGs most relevant to its business in order to bring about a convergence of interests and encourage the involvement of the entire production chain and distribution network. Our aim is to develop products that are designed by the world's top creatives, made from sustainable materials, and produced using the most innovative industrial techniques to reduce our impact on the environment. We are equally committed to offering customers products that are stylish and well made, and that accurately represent the age-old culture of beauty on which the value of Italian manufacturing is based.

We have already made the circular economy central to our environmental sustainability processes. At the same time, we believe it our duty to promote the circularity of beauty based on ethical and aesthetic sustainability. Italy's industrial system is generating a beauty-based economy as part of the country's immense cultural heritage, and Kartell is on the front line in this mission

				Kartell products are timeless and conceived to merit a place in museums and private collections.
				Our corporate strategy is based on ethical production, transparent financial management and the economics of beauty.
				Recycled materials contribute to the circular economy and ensure recyclability in other industrial processes.
				We invest in continuous research into new materials and new production processes (e.g. bioplastics derived from vegetable waste not destined for the food chain).
				Our industrial processes are waste and emissions free.
				We are ISO and Greenguard certified.
				Our packaging is recyclable and sustainable.
				We are engaged in social solidarity projects worldwide.
				We provide a sustainable working environment.
				We believe in training.

* In September 2015, the governments of the 193 member states of the General Assembly of the United Nations approved the UN's Sustainable Development Goals (SDGs). These 17 goals form a plan of action for peace and prosperity for people and the planet known as the 2030 Agenda for Sustainable Development.

BEING THE FIRST IN INNOVATION, COMBINING DESIGN AND INDUSTRIAL TECHNOLOGY

FEEDING THE BEAUTY OF THINGS AND RESPECT FOR PEOPLE.

A Kartell product is timeless, produced with the utmost respect for the environment and destined - on completion of its function - to occupy museum spaces and join collectors' assets. A beautiful and well made product, part of a production process that pursues perfection, pays attention to detail and studies every possible evolutionary change.

DOING GOOD AND MAKING PEOPLE FEEL GOOD

Kartell objects are environmentally friendly and hold certifications that confirm their low level of emissions.

CIRCULAR ECONOMY

New design for regenerative economy Kartell takes a better path in our commitment to environmental sustainability, using recycled materials where technology allows.

RESPECT FOR THE ENVIRONMENT AND SUSTAINABILITY.

For seventy years, Kartell has played a leading role in innovative production and product creativity. Respect for the environment is, and always has been a value that goes to the heart of the brand and in a bid to strengthen this commitment the company launched the "Kartell loves the planet" mission, the industrial manifesto with which it focuses on environmental responsibility and attention to good sustainability practices.

In recent seasons, Kartell has supplemented its use of traditional materials with innovative projects that summarize research and innovation of materials and production processes.

SOCIAL SOLIDARITY PROJECTS WORLDWIDE

Taking care of new generations

The "Kartell loves the planet" industrial mission statement extends our commitment to sustainability to social solidarity, including support for the education of young people in countries most in need of aid.

For example, for its seventieth anniversary, Kartell has launched a solidarity project in favour of the Fondazione Francesca Rava - N.P.H. Italia and its international "Building Sustainability through Education.

Empowering the young generation to be leaders of a green revolution" programme.

The company is awarding study grants to Latin American university students to sponsor research in environmental sustainability projects.

WOOD

Kartell sources wood only from FSC™ certified forests to guarantee its origin and the forestry management methods applied. FSC™ (Forest Stewardship Council) certification identifies products made with wood sourced from forest managed in a responsible fashion, in line with rigorous environmental, social and economic criteria. Forests of origin are independently controlled and assessed according to the principles and criteria of best-practice forest management established and approved by the Forest Stewardship Council™ with the participation and consent of all stakeholders. Being a material of natural origin, there are differences in the colouring and the characteristic wood grain.

BIO

This unique material is obtained from agricultural waste that cannot be used to produce food for humans or animals. With a biological process, the waste materials once "attacked" by microorganisms generate a biomass that is similar to plastic. After a series of processes to refine the composition, this biomass becomes a material of the highest quality, and Kartell was the first to experiment with this material in injection and moulding like other plastics. The material used for the Bio collection boasts exclusive properties of biodegradability in water and soil, as certified by prestigious international institutes such as Vinçotte Belgium and TÜV Austria.

Ask for FSC™ certified products

RECYCLED MATERIAL

A recycled thermoplastic technopolymer obtained from pure waste material that has been set aside and is not contaminated by other materials. The choice is dictated by the possibility to use scrap material that guarantees the aesthetic quality and structural requirements of the product, reducing the emissions necessary for its production. With this material, Kartell intends to go one step further in its commitment to environmental sustainability, using recycled material while eliminating waste from the environment and turning it back into raw material, activating a virtuous process of circular economy.

POLYCARBONATE 2.0

Polycarbonate 2.0 is a material, used exclusively by Kartell, which combines a second generation renewable polymer made from cellulose and paper waste with an ISCC (International Sustainability and Carbon Certification) certified process. ISCC was one of the first schemes for the sustainability of products throughout the supply chain in the renewable energy sector to be issued at European level, and it is now one of the most popular and widely recognised. The benefits of polycarbonate, such as superior shock resistant and flame retardant properties, elasticity, excellent mechanical properties and easy recycling, are retained in version 2.0.

circular economy

CERAMICS

The surfaces of the tables are made of special ceramics processed with low CO2 emissions, using industrial waste and recovering wastewater, resulting in exclusively designed sheets made in Italy.

These ceramic materials are made by a partner whose business model focuses not only on profitability but also on responsible operation, obtaining B Corp certification for the highest standards of social and environmental performance.

RE-TEXTILE

Some of the fabrics used for the armchairs, sofas and carpets are made from recycled materials such as PET bottles transformed into polyester or fabrics from regenerated fishing nets.

CERTIFICATION CARB

In order to reduce the emissions from composite wood-based panels incorporated into the products used and intended for indoor living environments, all the items which contain wood-based panels are made using certified materials, conforming to the emission levels envisaged by the CARB (California Air Resource Board) and TSCA Title VI (Toxic Substances Control Act) standards. The tables of the TOP TOP, FOUR, MAUI, MAX, MULTIPLO, GLOSSY, VISCOUNT OF WOOD and LUNAT collections, in the indoor versions, are CARB certified.

CERTIFICATION GREENGUARD

In its continuing commitment to protecting its customers' health, Kartell obtained Greenguard certification in 2014. When purchasing a Greenguard-certified product, consumers can be certain the product has been inspected, does not pollute and is not dangerous.

Greenguard is used by many certification processes for environmentally-sustainable buildings (LEED; CHPS; ASHRAE; Green Globes; NAHB; IgCC, CONSIP) around the world.

Greenguard certified categories:

All Kartell products that have received GREENGUARD certification are featured on the UL SPOT website.

<https://spot.ul.com>

RECYCLABILITY

Recyclability, sustainability, eco-compatibility - in two words environmental friendliness - are the issues at the heart of Kartell's product development strategy.

As regards recyclability, the eco-friendly focus begins as early as the design and production phase: to simplify recycling, the various components of Kartell products are easy to disassemble and separate into single-materials parts; furthermore, all plastic components are clearly marked to ensure that they can be easily identified and recycled.

PACKAGING

The packaging contains mainly recycled material and is 100% recyclable.

Contributing the environmental sustainability means eliminating wastage and the improper disposal of waste materials.

For more information on the recyclability of our products, visit: www.kartell.com

CERTIFICATIONS ISO 9001:2015

COMPANY QUALITY CERTIFICATION: ISO 9001

In 1996, Kartell decided to certify its Corporate Quality Management System in compliance with UNI EN ISO 9001:1994 standards.

In 2005, the company aligned its Quality Management Systems with the standard UNI EN ISO 9001: 2000.

In 2008, the company renewed its ISO 9001:2000 certification.

And, in 2010, it switched to UNI EN ISO 9001:2008.

During 2017 Kartell updated its certification standard to UNI EN 9001:2015.

A guarantor for this certification process is the I.I.P. (Italian Institute of Plastics), which is itself accredited by SINCERT and CISQ, the Italian federation of accreditation bodies for Quality Management Systems. CISQ is part of IQNET (International Certification Network), a supranational body which guarantees mutual recognition of the ISO standard in countries worldwide.

The attainment and maintenance of this certification, made possible by the commitment and perseverance of all company offices involved, testifies to the continued research into ever higher levels of quality in company management systems.

A copy of the Quality Certification is available for downloading on www.kartell.com

CERTIFICATIONS ISO 14001:2015

ISO 14001 CERTIFICATION

In 2011 Kartell achieved UNI EN ISO 14001: 2004 certification for its support of an effective Environmental Management System, an international standard recognised throughout the world and developed about 10 years ago which defines development and implementation parameters in corporate processes in order to achieve an effective environmental management system.

WHAT IS ISO 14001?

This certification attests that the organization certified has implemented a management system capable of controlling environmental impact in its own business and systematically endeavours to improve it in a sustainable, effective and consistent manner. ISO 14001 certification is not obligatory but is the result of the voluntary choice of the Company which decides to define, implement, maintain and improve its own environmental management system.

During 2017 Kartell updated its certification standard to UNI EN ISO 14001:2015.
A copy of the Quality Certification is available for downloading on www.kartell.com

List of the UNI EN tests for steps:

UNI-EN Norm 131-1/94

functional dimensions of the steps

UNI-EN Norm 131-2/93

flexibility of the feet and of the platform

Standard EN 1728:2000 took effect in 2002 (UNI EN 1728:2002 in Italy) harmonizing at the European level testing methods for resistance and durability of all the types of domestic seating. This regulation, which replaces previous ones, prescribes much more severe testing procedures than in the past.

Standard EN 15373 came into force in late 2007, updating the testing criteria, cycles and levels, with respect to EN 1728:2000.

Standard EN 16139:2013 came into force at the end of 2012, updating standard EN 15373 (see summary table).

In 2013, standard EN 1728 was updated to the EN 1728:2012+AC:2013 edition (in Italy UNI EN 1728:2012+AC:2013). Standard EN 1730:2000 updated with EN 15372:2008 (for Italy UNI EN 1730:2002) came into force in 2000 for the assessment of table performance took effect in 2000 to determine table performance. This standard stipulates the testing methods to determine the resistance, durability and stability of all types of tables. Tests are conducted on an assembled and ready-to-use table. The references to the characteristics tested are expressed with respect to the paragraph in the standard, as follows:

STANDARD UNI EN 15373:2000

paragraphs 5.1 - 5.2

General safety requirements

STANDARD UNI EN 1022/2005

Stability

STANDARD UNI EN 1728/2000

paragraph 6.2.1

static load on the back of the seat

paragraph 6.2.2

static load on the front edge of the seat

paragraph 6.5

static horizontal load on the arms

paragraph 6.6

static vertical load on the arms

paragraph 6.7

fatigue strength of the seat/back

paragraph 6.8

ear and tear on the front part of the seat

paragraph 6.10

fatigue strength of the arms

paragraph 6.12

static load on front legs

paragraph 6.13

static load on side legs

paragraph 6.15

resistance of the seat to blows

paragraph 6.16

resistance of the back to blows

paragraph 6.17

resistance of the arms to blows

paragrafo 6.21

solid footstool

STANDARD UNI EN 1730/2000

paragraph 6.2

static horizontal load

paragraph 6.3

static vertical load

paragraph 6.4

LIGHTING REGULATIONS CERTIFICATIONS

REFERENCE MARKS

CE – indicates the conformity of the products bearing the acronym with the essential requisites of European Community directives.

ENEC – the European trademark for high quality in electrical products which indicates conformity with current European regulations is recognised as the equivalent of the individual national trademarks in 20 European countries, signatories to the Lum Agreement.

ETL – American and Canadian trademark of quality for electrical products. It certifies product conformity with current American and Canadian regulations.

PSE – Japanese trademark of quality for electrical products. It certifies product conformity with current Japanese regulations.

NOM – Mexican trademark of quality for electrical products. It certifies product conformity with current Mexican regulations.

EK/KC – Korean trademark of quality for electrical products. It certifies product conformity with current Korean regulations.

CB Certificate (Australia and New Zealand)

Certification attesting product conformity with international IEC regulations, can be issued with specific national deviations.

CB Certificate – Certification attesting product conformity with international IEC regulations.

CCC – China Compulsory Certificate The brand certifies product compliance with Chinese standards and is mandatory for lighting products imported in China.

ECO-CONTRIBUTION

Introduced in Legislative Decree no. 151 dated 25 July 2005 (updating directives 2002/95/EC, 2002/96/EC and 2003/108/EC), the eco-contribution is an environmental charge used to pay for waste management of electrical and electronic equipment (WEEE). This charge is used to finance all phases of treatment, transport, recovery and disposal of electrical and electronic appliances. Kartell lighting prices include the WEEE.

NOTICE PURSUANT TO ARTICLE 13 OF LEGISLATIVE DECREE NO. 151 DATED 25 JULY 2005.

Directive 2012/19/UE (waste electrical and electronic equipment: WEEE):

User information: pursuant to article 13 of Legislative Decree no. 151 dated 25 July 2005, no. 151 "Updating of Directives 2002/95/EC, 2002/96/EC and 2003/108/EC, regarding the reduction in the use of dangerous substances in electrical and electronic equipment, and the disposal of waste" this product is conform.

The barred bin symbol on the equipment or their packaging indicates that at the end of its useful life, the product must be disposed of separately from other waste. The user must take the equipment to an authorised recycling centre for electronic and electric waste, or return it to the original vendor when purchasing an equivalent product, on a one-to-one basis. The appropriate collection for environmentally-compatible recycling, treatment and disposal contributes to avoiding possible negative effects on the environment and its health and encourages the reuse and/or recycling of the materials used in the equipment. Improper disposal of the product by the user will result in the application of the administrative sanctions stipulated by regulations in force.

ECODESIGN FOR LIGHTING

In response to current legislation, Kartell is working hard to bring its lighting products as closely as possible into line with the parameters established by the ECODESIGN directive.

The EU Ecodesign Directive establishes a framework under which manufacturers of energy-using products are obliged to reduce the energy consumption and other negative environmental impacts occurring throughout the product life cycle (production, use and disposal).

In particular, the regulation requires that light sources and their power supplies permit access for technical checking and that they be "disassemblable" to permit repair in the event of failure. Light sources must also be "replaceable" to permit upgrading or the installation of more efficient or improved components as these become available in future.
