LIGHT BOX SIGN SAFE INSTALLATION GUIDE

If the Light Box is mounted indoors and the electrical cable is visibly running down the wall to a power point, you have the option to install it yourself.

Never cover or seal this adapter inside of a wall or leave outdoors.

If you intend to pass the electrical cable through a wall using a conduit, it's important to have a registered electrician perform this task to ensure compliance with your local building regulations.

Never cover or seal this adapter inside of a wall or leave outdoors.

If you intend to hardwire your light into an existing electricle system, it's important to have a registered electrician perform this task to ensure compliance with your local building regulations.

This scenario will require a new adapter and dimmer components. These components can be specified by a registered electrician.

\rm ATTENTION

- If you notice any issues with your Light Box such as smoke or overheating, make sure to turn it off and promptly have it checked by an electrician.
- Turn off the main power supply before handling the product during installation, maintenance, cleaning, etc.
- Never cover or seal this adapter inside of a wall or leave outdoors.
- Do not alter the product or components provided with the product unless carried out by a qulified electrician.
