AluFrames

Aluminium rails for counterframes
Binari in alluminio per controtelai

AluFrames

PATENTED

AluFrames is a system of concealed tracks, designed for the installation of wall-pocket doors without counterframe.

AluFrames è un sistema nascosto in alluminio, studiato appositamente per far scorrere le porte dentro nicchie interne a parete.

An easy and versatile system

AluFrames system for wooden doors is available in combination with **Evolution** series (concealed bracket sliding system) and **Classic** series (standard bracket sliding system). **AluFrames** system for glass doors is available in combination with clamps series **Vetro 24** (24 mm (15/16") height glass clamps with glass drilling requirements) and **Vetro 40** (40 mm (1 37/64") height glass clamps without any drilling requirements).

The system has a maximum load **capacity of 80 kg, 176.37 lbs.**

The **AluFrames** system is **extremely easy to install and also easy to be inspected** (because the door is very easy to be dismounted without breaking the plasterboard): the magnetic **Push Magnetic** system allows to combine the soft closing function and at the same time facilitates opening when the door is completely open.

Un sistema facile e versatile

Il sistema **AluFrames** per porte in legno è disponibile con le nostre staffe serie **Evolution** (sistema scorrevole con staffa invisibile) e **Classic** (sistema scorrevole con staffa tradizionale).

Il sistema **AluFrames** per porte in vetro è disponibile con le nostre pinze **Vetro 24** (accessori per porte in vetro con forature e pinza alta 24 mm (15/16")) e **Vetro 40** (accessori per porte in vetro senza forature e pinza alta 40 mm (1 37/64")).

Il sistema è realizzato per portate **fino a 80 kg, 176.37 lbs.**

Il sistema **AluFrames** è estremamente **facile da montare**, di **rapida installazione** e di **facile ispezione**: il sistema con respingenti **Push Magnetic** combina il funzionamento di fermo e di apertura per porta totalmente aperta.
