ADJUSTMENT OF SECONDARY STOP

The adjustable secondary stop is used when traditional paired door handles or knobs are used for versions 1, 2 and 3 (see chapter 3. VARIANTS OF USE).

This also makes it possible to use a traditional lock.

To prevent the handle or knob from hitting the door when it is opened, the secondary stop must be adjusted by using a 3 mm hex key with ball end.

*** Important:** after adjusting the stop, a floor-mounted doorstop should also be installed.
