

## FOILED CHRISTMAS CARD

You will need: Blank cards, black toner photocopy (this can be from a carbon photocopier or a toner printer - not inkjet), textile foil, greaseproof paper, iron.

### Step 1)

Photocopy your design in black onto card. This can be from a carbon photocopier or printed with a toner printer but will not work with inkjet.

**Step 4)** Peel off the excess foil to reveal your foiled design!

**Step 2)** Place your foil shiny side up on your photocopy. Place a sheet of greaseproof paper on top.

**Step 5)** The finished card!

**Step 3)** Iron over the top on a medium heat for about ten seconds. You will see when it is ready as the foil will stick.
