

Ultraguard™

Tyvek®

Tyvek® is a unique material made of a spunbonded olefin. This protective fabric has become a standard in the industry for worker safety, material strength and durability. Tyvek® provides an excellent barrier against dry particulates including asbestos, lead dust and radioactive dust. Uncoated Tyvek® does provide splash protection, but is not recommended for extended exposure to liquid chemicals and gases.

Tyvek® Apparel is sewn with interlocking serged seams for durability and comfort. Other seams available include: sewn and bound, NSR I®, fused, and heat sealed.

Serged Seams join two pieces of material with an interlocking stitch. This is an economical method for general applications.

Tyvek® is made into a variety of apparel pieces including: Coveralls, Frocks, Shirts, Pants, Lab Coats, Aprons, Sleeves, Hoods, Bouffant Caps, Boot Covers, and Shoe Covers.

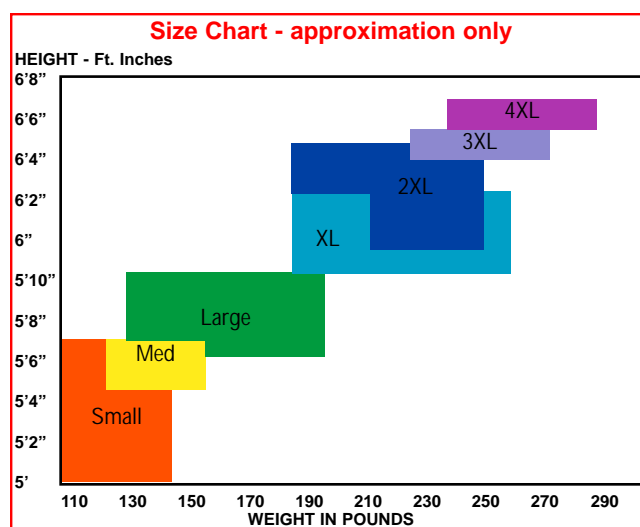

Applications: Paint spraying, pesticides handling, asbestos abatement, cleanroom, fiberglass handling, food processing, general maintenance, light chemicals, mining operations, and nuclear industries. (Tyvek®)

Specifications

Tyvek®

- Spunbonded Olefin
- Dry Particulate Barrier Protection
- Limited Liquid Barrier Protection
- Durable
- Lightweight
- Disposable
