**Radiant Heat /Elegance Wood Flooring.**

Elegance products have not been tested for use with any radiant wood flooring systems. Therefore, we do not recommend their use with our flooring products, nor will we warrant any product that fails in part or entirely because of the use of radiant heat systems. Use of a Radiant Heat system is at your own risk.

With radiant heat, the heat source is directly beneath the flooring, so the flooring may gain moisture or dry out faster than a similar floor in a home with a conventional heating system. Problem such as shrinking, expansion, cracking, cupping that are caused or exacerbated by the use of radiant heat are not covered by the Elegance Warranty.

For more information on Radiant Heat, please contact the NWFA. [www.nwfa.org](http://www.nwfa.org)
