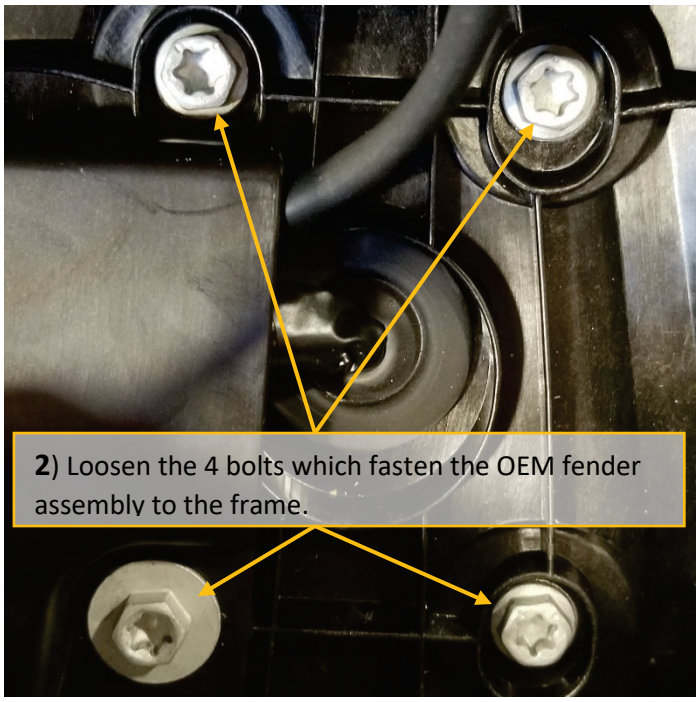
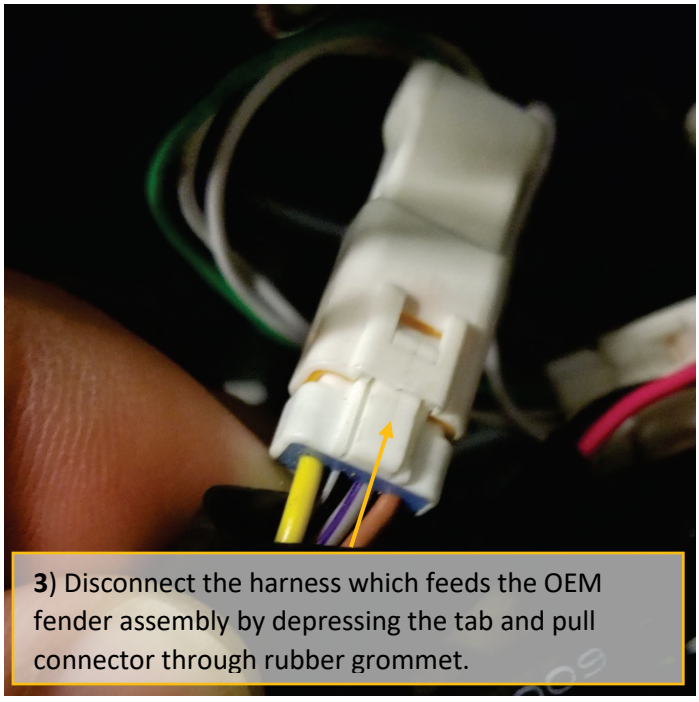
2020+ KTM 1290 SDR Ultimate Stealth License Plate Bracket

Illustrated Installation Instructions

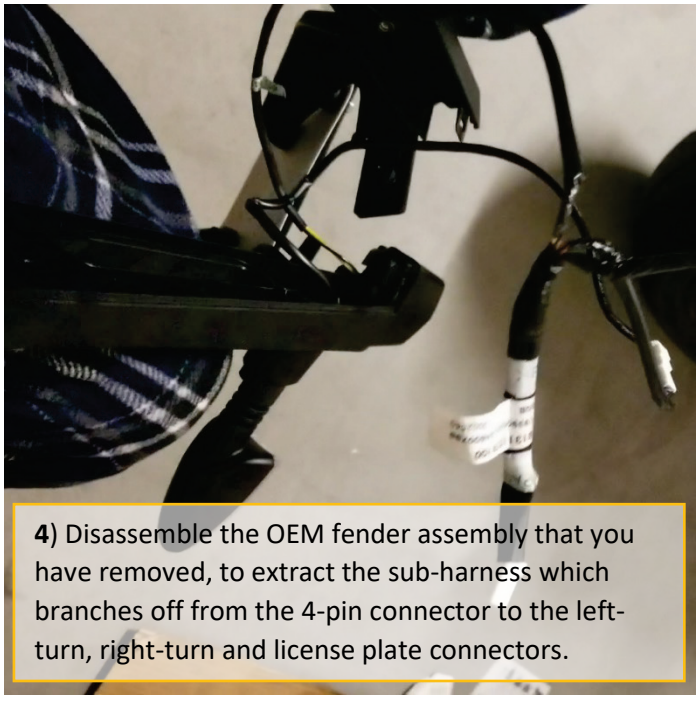
1) Secure the motorcycle and prepare to remove the OEM fender assembly.



2) Loosen the 4 bolts which fasten the OEM fender assembly to the frame.



3) Disconnect the harness which feeds the OEM fender assembly by depressing the tab and pull connector through rubber grommet.

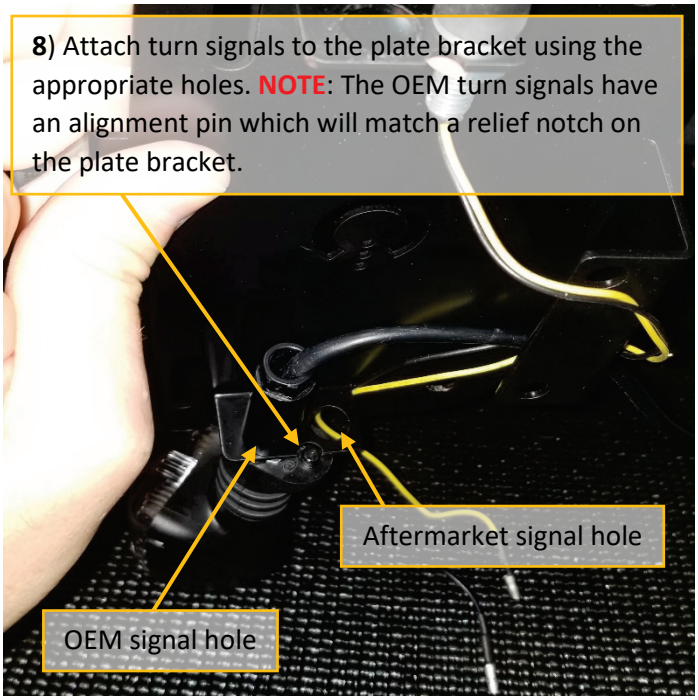


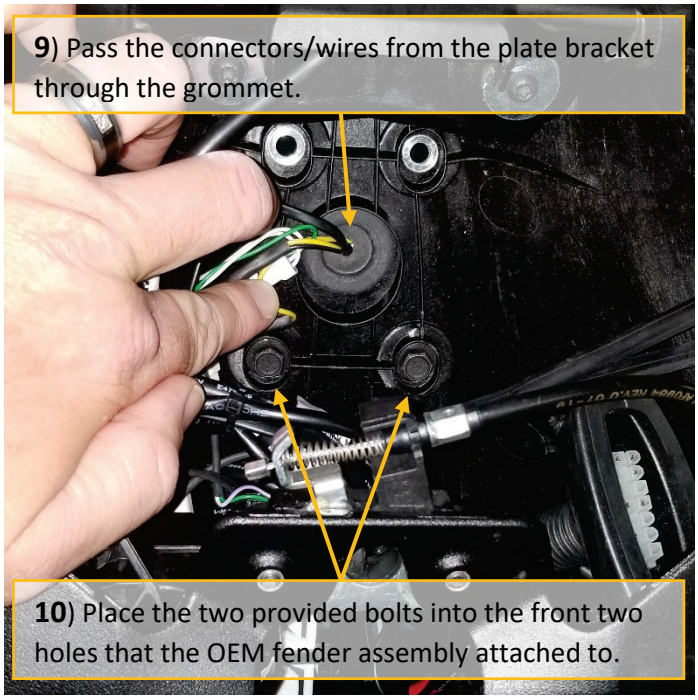
4) Disassemble the OEM fender assembly that you have removed, to extract the sub-harness which branches off from the 4-pin connector to the left-turn, right-turn and license plate connectors.

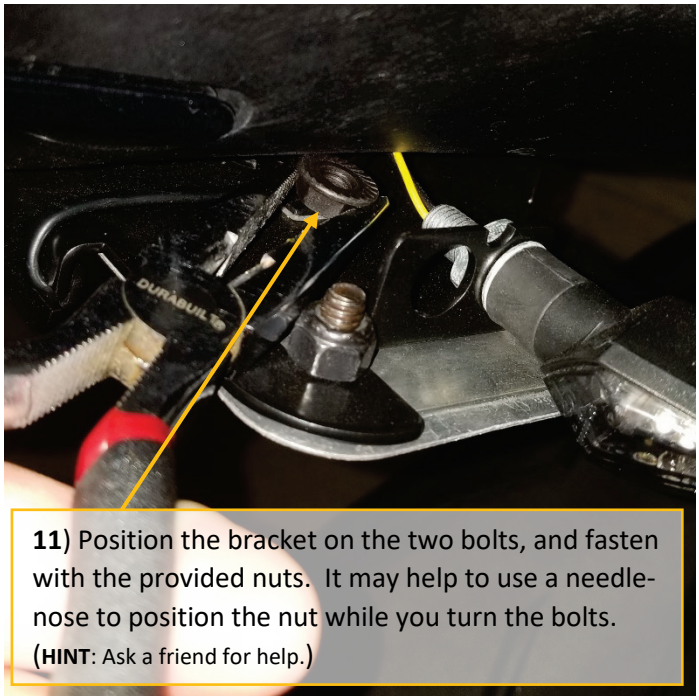
5) You will use this sub-harness with your new setup. Connect it back to the 4-pin connector which was disconnected in step 3. It will be kept inside of the tail section of the motorcycle.

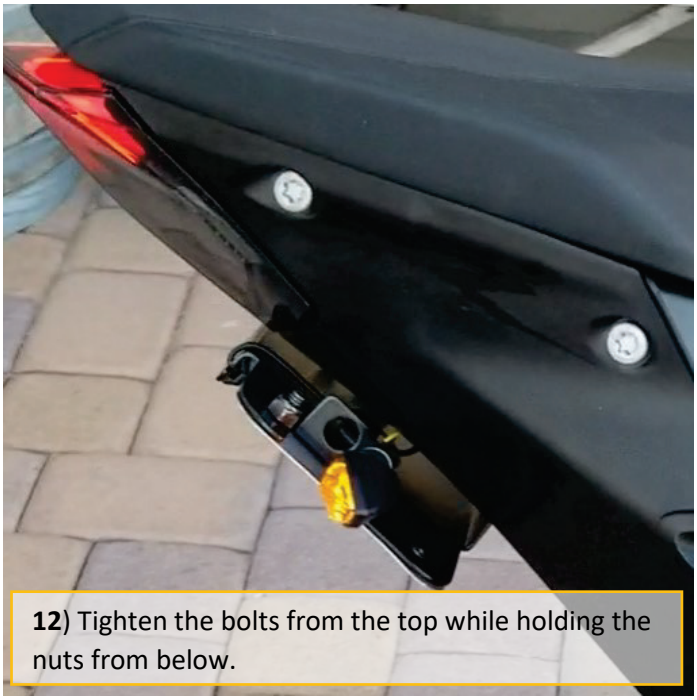
6) If you are going to use the OEM turn signals, remove them from the OEM fender assembly.

7) Attach the license plate to the plate bracket at this time.









13) Connect the turn signals and license plate light to the sub-harness that was relocated into the tail section.

14) Use the supplied rubber plugs to plug the unused holes in the undertail. Push them up through the holes from underneath.
