

CUSTOM LED PRE-WIRED BLINKER GENIE INSTALLATION INSTRUCTIONS

INPUT WIRES - PREWIRED

RED: POWER SOURCE +12V

THIS WIRE IS PREWIRED TO THE IGNITION SWITCHED RUNNING LIGHT CIRCUIT IN THE OEM CONNECTOR FOR COMPATIBLE MOTORCYCLES.

WHITE: TURN SIGNAL +12V

THIS WIRE IS PREWIRED TO THE TURN SIGNAL CIRCUIT IN THE OEM CONNECTOR FOR COMPATIBLE MOTORCYCLES. THIS LINE DRAWS APPROXIMATELY 150mA (LOW CURRENT) UNDER NORMAL OPERATION. THIS WILL CAUSE THE FAST-BLINK CONDITION ON MOST MOTORCYCLES. YOU SHOULD REPLACE YOUR FLASHER RELAY TO MAINTAIN THE NORMAL BLINK RATE. OTHERWISE, IF YOU ARE USING "CUSTOM LED LOAD EQUALIZERS" TO SLOW YOUR BLINK RATE, CONNECT THEM BETWEEN THE WHITE WIRE AND THE BLACK WIRE.

BLACK: COMMON GROUND

THIS WIRE IS PREWIRED TO THE GROUND CIRCUIT IN THE OEM CONNECTOR FOR COMPATIBLE MOTORCYCLES.

OUTPUT WIRES

YELLOW: NORMALLY "ON" +12V POWER

CONNECT THIS WIRE TO THE POSITIVE INPUT ON THE INDICATOR LAMP(S) YOU WISH TO FUNCTION AS RUNNING LIGHTS AND BLINKERS. THE VOLTAGE ON THIS LINE WILL BE INTERRUPTED (0V) WHEN AND FOR THE DURATION THAT THE WHITE WIRE IS SUBJECT TO 12V.

BLACK: COMMON GROUND

CONNECT THIS WIRE TO THE GROUND WIRE ON THE INDICATOR LAMP(S) YOU WISH TO FUNCTION AS RUNNING LIGHTS AND BLINKERS.

ELECTRICAL SPECIFICATIONS:

MAXIMUM RECOMMENDED SWITCHING CURRENT: 2A (30W)

MAXIMUM SWITCHING CURRENT: 12A

INTERNAL RESISTANCE: 0.18 OHMS

SWITCHING SPEED: SOLID STATE MOSFET: 1Mhz

IMPORTANT NOTE REGARDING LED LAMPS AND INDICATORS

SOME LED FLUSHMOUNT MANUFACTURERS DESIGN THEIR PRODUCTS TO OPERATE ONLY AS A BLINKER AND THEREFORE "OVERDRIVE" THE LEDS TO GET ADDITIONAL BRIGHTNESS. THIS DESIGN METHODOLOGY REQUIRES THAT THE LEDS OPERATE ON A 50% DUTY CYCLE (ON AND OFF, NOT CONSTANTLY ON). WHEN OPERATING THESE TYPES INDICATORS AS A RUNNING LIGHT, YOU MAY OVERHEAT AND DAMAGE THE LEDS. CHECK WITH THE MANUFACTURER OF YOUR LED INDICATORS BEFORE USING THEM AS RUNNING LIGHTS - OR MONITOR THEM CAREFULLY FOR HEAT BUILDUP AFTER INSTALLATION. IF YOU NOTICE EXCESSIVE HEAT BUILDUP, REFER TO THE DIAGRAM ON THE RIGHT AND INSTALL A 1/2 WATT RESISTOR IN LINE WITH THE YELLOW WIRE FOR EACH LED MODULE ACCORDINGLY. THIS WILL REDUCE HEAT BUILDUP AND PROLONG THE LONGEVITY OF YOUR LED

TYPICAL INSTALLATION DIAGRAM

NOTE: FOR LED INDICATORS SEE ADDITIONAL INFORMATION ON REVERSE SIDE!

TROUBLESHOOTING:

PROBLEM: YOU INSTALLED THE CUSTOM LED BLINKER GENIE AS THE INSTRUCTIONS SAY BUT THE BLINKERS BLINK ONCE THEN STOP OR THEY DON'T BLINK AT ALL OR THEY BLINK TOO FAST.

CAUSE: THE STOCK FLASHER RELAYS ON OUR CARS AND MOTORCYCLES - WHICH ARE THE DEVICES THAT MAKE BLINKERS "BLINK" - ARE DESIGNED TO BLINK TWICE AS FAST AS NORMAL WHEN A BULB IS BURNED OUT. THIS IS TO LET THE OPERATOR KNOW THAT THERE IS A BLINKER BULB BURNED OUT. MOST AFTER MARKET BLINKER PRODUCTS (INCLUDING CUSTOM LED PRODUCTS) CONSUME SO LITTLE POWER COMPARED TO THE STOCK BULBS, THAT THE FLASHER RELAY THINKS THAT A BULB IS OUT WHEN THIS IS NOT THE CASE. SOMETIMES, THE POWER CONSUMED IS SO LITTLE, THAT THE BLINKERS DON'T EVEN BLINK AT ALL!

SOLUTION: SIMPLY REPLACE THE FLASHER RELAY WITH ONE THAT IS NOT DESIGNED WITH A "BULB OUT NOTIFICATION" OR YOU COULD INSTALL A CUSTOM LED LOAD EQUALIZER. THE CUSTOM LED ELECTRONIC FLASHER RELAY, OR LOAD EQUALIZERS, ARE THE PERFECT SOLUTION FOR THIS! SEE [HTTP://WWW.CUSTOMLED.COM](http://www.customled.com) FOR MORE INFORMATION.

NOTE: ALL POWER TO RUN THE LOADS ON THE OUTPUT SIDE OF THE BLINKER GENIE IS DRAWN FROM THE RED WIRE ON THE BLINKER GENIE - THE WHITE WIRE ONLY DRAWS 150mA. FOR ALL INQUIRIES AND TECHNICAL SUPPORT, PLEASE CONTACT: [SUPPORT@CUSTOMLED.COM](mailto:support@customled.com).
