

native SHOES

Printing Instructions

- ensure printer options are not set to "Fit to Page" and/or that page scaling is set to "None"
- once printed, check the scale using a ruler against the measurements printed to the left of the page

Measuring

- fold along dotted line at bottom
- lay on floor with fold against a wall
- put bare heel against wall where indicated
- ensure stance is evenly distributed on both feet
- measure both feet, taking note of the larger result
- result will indicate size shoe required and is indicative of the internal measurement of that size (this scale does not represent actual shoe external measurements)

Note

- children's feet can grow a full size in 6 months
- a minimum of 1cm internal space between toes and end of shoe is recommended
- 'keep it lite'
