## CORAL ACCLIMATION GUIDE

**STEP 1:** Unpack your coral from the shipment box and float the bag(s) in your aquarium for at least 15-20 minutes. This will allow the temperature of the water in the bag(s) to match the temperature of the water that is in your aquarium.

**STEP 2:** Grab a large clean container and a clean razor blade. Carefully cut a small slit into the bag(s) and empty the water along with the coral(s) into your container. Slowly add a small amount of water from your aquarium into the container every 5 minutes for at least 30 minutes! This step allows your new coral(s) to gradually acclimate from the parameters in the bag to the parameters in your aquarium.

**STEP 3:** Congratulations! Your new coral(s) should now be acclimated and ready to be added to your aquarium! Please note that new coral(s) should always initially be placed in lower lighting and gradually moved to higher intensity over the course of a few weeks as the coral(s) adapt and adjust to their new environment.

### IN THE EVENT THAT A LOSS OCCURS:

- DO NOT discard the specimen! Doing so will void the guarantee.
- Take clear photos of the DOA specimen both inside and outside of the bag within TWO hours of delivery.
- Email us at [sales@livingreeforlando.com](mailto:sales@livingreeforlando.com) with your order number and photos of the specimen.
- Verified and accepted DOA's will be credited towards future livestock purchases! (Excludes any shipping charges)

### DIPPING YOUR NEW CORAL

Dipping is a common practice that is used when adding new coral(s) to an aquarium. While dipping can be both helpful and effective it can also become harmful when over exposure occurs. If you choose to dip, we do not recommend exposing your corals to the solution for more than 5 minutes. Be sure to set a timer as it can be easy to lose track of time!

Living Reef Orlando is committed to delivering top quality livestock and customer service! We offer a 24 HOUR guarantee on any livestock purchase - so you can shop with confidence!
