Personal Testimony:

My first time on an Equicizer

My third time on it

I **ABSOLUTELY LOVE** what frequently riding my Equicizer does to my body! ! !

If I **CONSISTENTLY** ride an Equicizer **FOUR TO SIX TIMES** EACH week,

I experience improvements in these areas:

- Relaxed muscles
- Prolonged weight bearing ability
- Core strength and balance
- Fine motor control and range of motion
- And much more. . .

Rita Roberson
San Diego, CA

What Therapists Are Saying

“The Equipony can be used to address goals related to:

- physical disabilities
- emotional/behavioral problems
- language delays
- enhancing and facilitating play skills

This supports the Sensory Integrative Approach used throughout much of an Occupational Therapists intervention with young children.”

*Cheryl Butler
Occupational Therapist
United Cerebral Palsy Manhattan Children's Program.*

The Equicizer was substituted when a horse with slow movement was not available for a client with MS who:

- Could only ride a real horse for a very short period of time before it exhausted her
- Could not sit up without pushing on the surcingle handle, and even that was difficult

Her progress on the Equicizer was amazing!

She can now:

- ‘Ride’ the Equicizer for about 40 minutes
- Make him move on her own for up to 10 minutes with her hands on her thighs, sitting completely independently
- Maintaining her balance and posture while a volunteer moves the Equicizer for her

She has come this far in only one month.

Amy Austin
Therapeutic riding instructor,
Chastain Horse Park, Atlanta, GA

The Equicizer Is The Solution For This Texas Family

Her doctor recommended equestrian therapy on a daily basis but the closest therapeutic riding center is almost an hour drive.
