

Body Motion Equicizers made 1993-1997

The side of the spring with the larger opening in the hook goes on the eyebolt inside the Equicizer

Have the open end of the hook on the spring facing to the inside of the Equicizer as shown.

Attach the end of the spring that goes on the bottom base frame first, then on the eye bolt that is fastened to the Equicizer. Much easier with two people. Horse can be turned upside down on it's back, may be easier to fasten springs.
