Please read these instructions **BEFORE** you assemble and use the EVANNEX Center Console Table.

The EVANNEX Center Console Table provides you with a flat and convenient eating or working surface that sits above your Tesla center console. The rear of the table sits on the center console arm rest. The front of the table is placed on the center console using a vertical leg that has been designed for the Tesla model ,S, 3, X or Y that you own.

**WARNING:** The EVANNEX Center Console Table/Desk is intended for use ONLY when the vehicle is stationary. It has not been designed for permanent installation or for use while driving. **Do NOT leave the EVANNEX Center Console Table/Desk in place while driving.** Interior damage and/or personal injury can result.

### Assembly

**Step 1. Insert the vertical leg into the table top.** The three prongs (A1, A2, A3) fit into the slots (B1, B2, B3) of the table top. **Note:** The fit is intended to be tight. If, however, the prongs cannot slide into place due to inherent variation in the thickness of ABS plastic, use a file (a nail file will normally work if you don't have a wood or metal file) to widen each of the slots B very slightly (~0.5mm)

**Step 2. Place the assembled center console table as shown in the photo on the right.**

*Your installation is complete.*

### Storage

Disassemble the Center Console Table/Desk and store in your frunk, your truck, or in the space between the passenger seat and the center console.
