Model 3 AR Instructions

1. PRINT THIS IMAGE

2. Now that you've printed this page, if you'd like, cut the target image to size and glue/tape it to any business card, allowing you to carry the target wherever you go.

3. Go to your App Store (iPhone or Android) and search for "kinetic vision ar experience" (our augmented reality app)

4. Download the app (it's free). When app opens, allow the app to access your camera (on iPhone, click OK). On the home screen of the app, select the "Close" button on bottom. After that, you'll simply be using the app's camera function.

5. Point your smartphone camera at the "target" that you've printed out. Note: Once the camera recognizes the target (this may take a moment), the Model 3 will appear.

6. Your three-dimensional Model 3 appears and can be manipulated in space (by moving and/or rotating the target) as if it were a physical object. You can also zoom inside the Model 3 interior.

NOTE: Every order of an EVANNEX product has a pre-printed Model 3 AR target business card included. Once you have it, point your mobile device at it, and your Model 3 will appear.

IMPORTANT DISCLAIMER: Both the Android and iPhone apps have gone through extensive testing prior to release in their respective app stores. Due to the large number of smartphone models and configuration options, EVANNEX and Kinetic Vision are not responsible for any issue that might arise due to your installation of the kinetic vision ar experience app. Please note: the "Download Marker" and "Instructions" inside the app itself only works with another AR vehicle — not the Model 3. Therefore, it's imperative that you follow the instructions on this page. Support: Please note that we are not able to help you debug individual Android or iPhone issues (e.g., the app doesn't download properly or the virtual AR Model 3 doesn't appear) that might arise once you have installed the app.
