

Glove Box Bumper for Model S, 3, X and Y Installation Instructions

Thanks for purchasing Glove Box Bumper™. Please read these installation instructions in their entirety BEFORE you attempt to install the bumper.

Glove Box Bumper™ has been designed to improve the storage efficiency of your Model S, Model 3, Model X and Model Y glove box. We've created an **Installation Video** that can be viewed at evannex.com. We recommend that you view it BEFORE you install Glove Box Bumper™.

Tools suggested: Tape measure or ruler.

Step 1. Remove the red covering from the double-sided tape on the bottom of Glove Box Bumper. Use the tabs on the sides of the tape to help remove the red covering. **Warning:** The tape is VERY sticky. DO NOT place it face down on any surface before installation.

Step 2. With your glove box door open, position the Glove Box Bumper using dimensions and placement shown in the adjacent photos specific to your vehicle. **IMPORTANT:** It is important that you install the bumper as shown, using the positioning and dimensions noted in the photos. **WARNING: DO NOT position the bumper base forward of the position shown.** Doing so may impede your ability to close the glove box door.

Step 3. Once it has been properly positioned, press down on Glove Box Bumper to finalize adhesion. The base will adhere to the door surface.

Your glove box bumper is installed.

Removal: Glove Box Bumper is intended for permanent installation. To remove Glove Box Bumper, rock it from side to side, it will loosen and can then be pulled off from either the right or left edge. **Note:** Once removed, the adhesive is weakened, so reinstallation cannot be guaranteed.
