

# POA TRIVIALIS

## Sabre III

### Sabre III - *Poa trivialis*

was developed to provide golf course superintendents who overseed with a denser and darker green turf. Sabre III has shown improved overall turf quality in comparison to older varieties. Other benefits of overseeding with Sabre III included rapid establishment and a good level of resistance to leaf spot caused by Drechslera app.

Sabre III was developed for elite, rapid to establish, easy transitioning winter overseeding turfgrass mixtures. It's also recommended in mixes designed for cool season, shade tolerant, mild climatic zones. In winter overseeding benefits include: rapid transition, LHC and low temperature tolerance at establishment. It has excellent shade tolerance. Sabre III can also be used to repair damaged *Poa annua* greens. It can be used in deep shade blends for permanent turf.
