

# Penclic Wired Numpad

## Ergonomics in focus

The Penclic Numpad delivers a healthy working position for the hand and wrist.

Having the numeric keypad separated from the keyboard allows users to vary the position of their hand during work and thus reduce the risk of problems that may occur from a static working position.

Penclic Numpad is designed in a matte shade that reduces reflections of light and is better from a visual ergonomics perspective.

## Comfort and efficiency

Penclic Numpad, just like the Penclic Keyboard, is only 5 mm high, reducing the effort of the wrist working on a higher keyboard. Quiet-touch keys are full-sized and comfortable, they minimize noise and require only a light touch, allowing users to work in a relaxed and efficient manner.

The Penclic Wired Numpad is perfect to use with a laptop or connected to a Penclic Keyboard.
