Seeds for Africa

Dypsis Lutescens

Fill a gallon-sized pot with soilless potting mix to within an inch of the pot's brim.

Bury the seed in the soilless potting mix to a depth so that its top surface is just barely visible.

Water the pot twice a day or as necessary to keep the top couple of inches of potting mix moist.

Place the pot in a brightly lit area that is out of direct sunlight. For the best germination rates, maintain a temperature around the pot of 80 to 85 degrees Fahrenheit. The areca palm will typically germinate within two to six weeks.
