Lemon Grass

Fill a seed starting mat with moistened, sterile, soil-less seed starting mix.

Sprinkle lemon grass seed over the mat. Cover with a thin layer of vermiculite.

Place the mat in a clear plastic bag, or cover with plastic.

Place in a warm room out of direct sunlight. Lemon grass seeds germinate at 70 to 75 degrees F. Place the covered flat on a seed starting mat set at 72 degrees F. To be safe, make sure the plastic is not touching the mat.

Keep the seed starting mat moist, not wet, before and after the seeds germinate.

Lemon grass seeds will germinate between 21 and 40 days. When the seedlings are large enough to handle, gently lift out of the seed starting mat. Place the seedlings in individual 3-inch pots filled with sterile potting mix or compost.
