Pycnostachys Utricifolia

Pycnostachys urticifolia forms a large bush and is suitable for the back of an informal border. The hedgehog sage requires a warm, sheltered position in cold areas and it grows well in the open sun as well as in partial shade in ordinary garden soil. The plant is propagated by seed sown in spring or early summer or cuttings taken in spring or early summer.

Plant seed at equal depth to seed size and keep well watered.
