

## Sweet William

Prepare the area you are going to plant your Sweet Williams Flower Seeds by removing all weeds and rocks and making the soil loose and raking level.

Sweet Williams grow best in full sun and loose well-drained soil. I have found Sweet Williams grows best in sandy soil.

Sow Sweet Williams Flower Seeds directly outdoors in early spring or start indoors 6 - 8 weeks before the last frost. Sweet Williams seedlings transplant well and grow easily from seed.

Sow seeds 1/2 inch deep and 2 inches apart. Germination of Sweet Williams Flower Seeds is 5 - 10 days.

Thin seedlings or transplants 6 inches apart when seedlings are 3 inches tall.

Thin in early morning when the soil is cool and moist, carefully remove the surrounding soil and the seedling and transplant to other areas in your garden. Sweet Williams transplants very easily.

Once established Sweet Williams thrives with few problems. Easily reseeds and multiplies year after year.
