

What is **VertiGarden**?

VertiGarden is a modular system that allows anyone to grow a vertical garden. The growing modules, with built in irrigation, allow for a vertical garden to be created easily and cost effectively whatever the size.

VertiGarden Easy

- VertiGarden Easy is the NEW modular system for the home gardener having been developed from the Classic Vertigarden form which has been used extensively overseas and in the UK since 2008
- Robust construction
- Easy assembly
- Built in irrigation
- Easy to plant / Easy to replant
- Proven System
- Modular, can be easily extended

VertiGarden Easy

How does it work?

- Each module has two growing sections each watered by two irrigation drippers.
- Drippers are fitted externally on the front of the module
- Water runs backward and then falls on to the planting compost
- Water runs through the compost and drains to the front of the grow section where it drips from the front edge, clear of the surface on which the modules are fitted.
- Unique 'clip-in' front panels allow for easy planting of any size of plant from a seedling to a dumpy 10cm pot plant.

VertiGarden Easy

- Each module is 400mm wide x 240mm tall and 90mm deep
- Can be planted with up to 8 plants.
- Module comprises of: a high impact plastic Module Body pre fitted with a “designed for purpose” irrigation string with in-line drippers, 8 separate front panels that simply clip into place. universal brackets, screws, wall plugs, irrigation connectors and full planting and assembly instructions

VertiGarden Easy

- The module is filled with a good quality compost (approx 5 litres) into which a slow release fertilizer has been mixed
- Unit is then closed by clipping in the 8 fronts
- Module is planted and grown on in the horizontal position until plants are established
- When ready - hang in the vertical position
- Internal irrigation is now used, connecting to a header tank or a pressure regulated micro drip irrigation system.

VertiGarden Easy

- Can be successfully planted with any size plant, from a seedling to 10cm pot bedding.
- For Pack bedding or 9 / 10cm pot plants:
 - Remove plants from pack or pots and place four equally spaced into each section
 - Fill in between the plants with a good quality compost incorporating a slow release fertilizer
 - Using the split fronts pass the foliage through the fronts and clip into place

VertiGarden Easy

- Can be mounted on almost any sound vertical surface
- Brackets are secured with just 2 screws
- A fully planted and watered VertiGarden module can weigh up to 8kg.
- The wire spacers are used to hang a second set of brackets at the correct distance from the first

VertiGarden Easy

- Once hung the modules are watered via the irrigation string, designed for low pressure operation.
- Irrigation of the module can be via a water tank for 1 to 4 modules, or connected directly to a pressure regulated (1.5 bar) micro drip irrigation system (Hozelock)
- Irrigation strings can be connected allowing up to four modules (hung under one another) to be watered from one input.

VertiGarden Easy WATER TANK

- Made for purpose water tank, provides an easy way to water up to 4 modules
- Filled with water the module will take about 20 minutes to empty
- Supplied with screws, wall plugs and foam filter
- Lid designed to take three 9 cm pots

VertiGarden Easy

- Modules are stackable, various packing options are available

VertiGarden Creativity?

The **VertiGarden** systems are designed to BUILD, grow one for a spectacular alternative to a hanging basket, two for a unique display, three or more for creative, imaginative show pieces.
