

The Flat Slide Docking Station

The **Docking Station** is a new option for those who do not want to leave their **TemboTusk Flat Slide** in the vehicle all the time. The **Docking Station** is permanently installed and allows the **Flat Slide** to be easily removed or reinstalled without having to deal with hard to reach bolts. Have two vehicles? Put a **Docking Station** in each vehicle for ease of swapping your **slide** from vehicle to vehicle. The **Docking Station** moves the bolt down location 1.5" inboard or outboard to accommodate drawer system differences.

The **Docking Station** has a quarter inch profile which will not interfere with the normal usage of your cargo area when the slide is removed.

Installing the Docking Station: Position the two docking plates with the bolt down tabs both facing in or out. (See the picture above.) Position the Docking Plates under the slide base and line up the threaded holes on the plate with the holes in the slide base. Use the supplied bolts to secure the slide base to the docking plate. Position the slide in the vehicle and use the bolt down tabs to secure the slide base to the vehicle.

Depending on the install, the docking plates can be reversed, with the bolt down tabs facing in or out. This will allow the bolts to be either inside or outside the frame of the slide.
