

# How to Install and Use the Skottle Burner Wind Shield

Remove the burner from the Skottle burner cage, insert the wind shield into the burner cage and reinsert the burner.

**Most important when using the wind shield is to keep the open end of the shield pointing into the wind.**

*(Science: Pointing the open end of the shield into the wind creates a high pressure area around the burner and allows the burner to operate better in the wind. Reversing the shield will cause a vacuum to form pulling the flame away from the bottom of the pan.)*
