## Systèmes Hydroniques

### Is a hydronic towel warmer right for me?

A hydronic towel warmer may be suited to your home if:

- You have a boiler system
- You are able to install the towel warmer(s) on a closed loop
- The loop incorporates an anti-rust inhibitor
- The loop operates at approximately 160°F/70°C (+/- 10%)

If all these options apply, then a hydronic Tuzio towel warmer will fit perfectly into your home!

### Un chauffe-serviettes hydronique me convient-il?

Un chauffe-serviettes hydronique peut convenir à votre foyer si:

- Vous avez un système de chauffage à chaudière
- Vous êtes capable d'installer le chauffe-serviettes sur un circuit fermé
- Le circuit incorpore un inhibiteur de rouille
- Le circuit fonctionne à environ 160°F/70°C (+/- 10%)

Si toutes ces conditions s'appliquent, alors un chauffe-serviettes hydronique Tuzio s'adaptera parfaitement à votre foyer!

### What will I need to install my hydronic towel warmer?

You'll need 3 pieces for successful installation:

- Hydronic towel warmer: all product codes begin with H for hydronic models
- A set of valves: either a floor set, or wall set depending on the location of your feed pipes
- An installation pack: the standard 24" installation pack can be cut to size and works with all ICO valves

Please note, if you've selected a Traditional Tuzio towel warmer (see pages 42-45), then you'll require a traditional gate valve.

### De quoi aurai-je besoin pour installer mon chauffe-serviettes hydronique?

Vous aurez besoin de 3 pièces pour une installation réussie :

- Un chauffe-serviettes hydronique : tous les codes de produit commencent par H pour les modèles hydroniques
- Un jeu de robinets: soit un jeu pour plancher, soit un jeu pour mur selon l'emplacement de vos tuyaux d'alimentation
- Une trousse d'installation : la trousse d'installation standard de 24 po peut être coupée à la taille désirée et fonctionne avec toutes le robinets ICO

Veuillez noter que si vous avez sélectionné un chauffe-serviettes Tuzio traditionnel (voir pages 42 à 45), vous aurez besoin d'un robinet-vanne traditionnel.

The slave unit system is ideal for 110V and 220V applications where the area of heated floor exceeds certain square footages. The slave unit is used in conjunction with the T5268 touchscreen thermostat or the T5269 touchscreen thermostat with WiFi – it cannot be used with the T5267 programmable thermostat. Each slave unit is capable of controlling up to 150 sq ft (110V) or 300 sq ft (220V) of heated floor area.

### Benefits include:

- Precision temperature control of larger heated floor areas using one thermostat
- Zoning capabilities throughout larger heated floor areas
- 2 year warranty

Le système d'unités secondaires convient au chauffage sur 110 V ou 220 V d'une aire de chauffage excédant une certaine superficie. L'unité secondaire s'associe au thermostat à écran tactile T5268 ou wifi à écran tactile T5269 – mais pas au thermostat programmable T5267. Chaque unité secondaire peut contrôler une aire chauffée allant jusqu'à 150 pi ca (110 V) ou 300 pi ca (220 V).

### Voici quelques-uns des bénéfices:

- Un contrôle précis de la température dans de grandes aires à partir d'un seul thermostat
- La création de zones de chauffage à l'intérieur d'une aire de plus grande dimension
- Garantie de 2 ans

## 110 Volt projects exceeding 150 sq ft Projets de 110 V excédant 150 pi ca

When heating more than 150 sq ft of floor area using 110V power, you will need to add one or more slave units. In addition to a thermostat, add a slave unit (Code T5304) for every 150 Sq Ft or 14.9 amps of heated floor space.

Pour chauffer une aire excédant 150 pi ca sur une tension de 110 V, prévoyez au moins une unité secondaire. En plus du thermostat, comptez une unité secondaire (code T5304) par 150 pi ca ou 14,9 A de superficie chauffée.

- Never cut the yellow heating cable!
- We recommend a 3" spacing between cable runs
- Ensure the yellow cables never touch
- Don't forget to install your thermostat heat sensor prior to installation of flooring
- You will need less infloor heating than the total floor area to be tiled
- If you have too much infloor heating cable or mat, you cannot cut off the excess product and discard – a correct size will have to be reordered
- We recommend staying approximately 6" away from walls – this then provides a buffer zone where excess cable can be used up should you have too much
- The cold lead at the end of the heatmat or heating cable is 10' long
- Do not put infloor heating under fixed objects such as bathtubs, freestanding vanity units etc
- Don't forget to attach your circuit fault detector during floor installation
- Don't forget to complete your warranty application form – you will need a multi-meter to do these tests
- Infloor heating cable or mat must be completely covered in thinset
- Keep yellow heating cable at least 6" away from toilet wax rings.
- Ne jamais couper le câble chauffant jaune!
- Il est recommandé de tramer le câble à intervalles de 3 po.
- Éviter tout point de contact entre deux sections du câble jaune dans le tramage.
- Penser à installer le senseur thermique du thermostat avant le carrelage.
- Les matériaux de chauffage radiant doivent couvrir une surface inférieure à la surface devant être carrelée.
- Si le câble chauffant est trop long ou si la dimension du treillis est excessive, il ne faut pas en couper l'excès – il faudra commander à nouveau les matériaux dans la bonne quantité.
- Par précaution, il est recommandé de prévoir une zone tampon de 6 po le long des murs afin d'accueillir un éventuel surplus de câble.
- La sortie froide à l'extrémité du treillis chauffant ou du câble chauffant est longue de 10 pi.
- Ne pas étendre de matériaux chauffants en dessous d'objets fixes comme une baignoire, un lavabo sur pieds ou piédestal, etc.
- Fixer le détecteur de court-circuit en place pendant la pose du carrelage.
- Penser à remplir et soumettre le document de garantie – un multimètre sera requis pour vérifier des mesures.
- Le câble chauffant ou le treillis câblé doit être entièrement recouvert d'un lit de mortier mince
- Maintenir le câble chauffant à au moins 6 po de distance du joint d'étanchéité de la cuvette de la toilette.
