### Used in Builders Merchants for 25 years

Our baskets have been a firm favourite in builders merchants, primarily used in the showroom to display plastic gutter and waste fittings.

### Ideal for Order Picking

Use the baskets to make aisles and order picking areas within your warehouse. Dividers and labels can be used to separate and identify stock for fast picking. Wheels can be added to make order picking trolleys.

### Great for Clothing

The open front design means that cellophane wrapped clothing can be stored, without risk of it slipping on to the floor. Many clothing warehouses have changed over to our baskets, having first tried the traditional method of standard shelving. The plastic coating ensures that garments aren't at risk of snagging.

# Pallet Racking

## Galvanised Pallet Racking from Stock

Need industrial pallet racking in a hurry, but still at a fantastic price?

We hold large stocks of GS Variant pallet racking, allowing us to offer fantastic prices and fast 5-7 day delivery. The system is made from pre-galvanised steel, making it ideal for use inside or out.

Most frame and beam sizes are available, with 2.7m being the most popular beam length

## Painted Racking & Other Systems

We also offer other pallet racking systems, and painted finishes, as we are not tied to any one manufacturer.

Whether it is one bay, or a full warehouse you require, please contact us for a fast, no obligation quotation.

We offer a free design & layout service, and can visit your premises anywhere in the UK.

## Fitting Service

A separate installation cost can be supplied if desired. All our fitters are SEIRS registered and have a wealth of experience.

# Mezzanine Floors

**Whether your floor is small or large, let Filplastic make it hassle free by guiding you through the process.**

- We offer a free site visit to establish the size and specification requirements. This can be followed by a more in-depth site survey if required.
- Once a specification has been decided upon, our C.A.D team will provide a drawing, again all free as part of our service.
- A detailed quotation will then be provided with no obligation to buy.
- If you decide to buy from us we can deal with all the building regulations and can usually start to fit the floor in 3-4 weeks from approval.
- As well as standard freestanding floors, another option is a rack-supported floor.
- These are used to create an area above pallet or longspan racking which replaces the floor space lost to the footprint of the racking.
- Accessories such as pallet gates and staircases can be supplied as separate items. Please call our sales office for a quotation.

# Longspan Racking

**When there is a fairly heavy duty application, but stock is handled manually, longspan racking is the ideal solution.**

- Shelf loads are typically between 400kg-1000kg and are complete with steel or chipboard shelf panels.
- There are many size configurations available, and more than one bay shares a central upright so the cost is lower than stand-alone bays.
- Most longspan racking can be delivered within 5 days.
- Palletised products can be stored at floor level, with loose stock stored on the shelf levels above.
- Longspan is a flexible system which can be adapted for tyre, door or garment storage.

## Cantilever Racking

**Long & heavy products are stored with ease on cantilever racking. Great for timber packs, pipes and lintels.**

Very little floor space is used in comparison to the amount of product which is stored.

The racking can be single or double sided, in a painted or galvanised finish.

The uprights are braced at centres, usually between 1000mm and 1500mm, but all racks are made to order so any size can be catered for.

Call for a quotation or site visit.

## Vertical Racking

**Vertical Racking is a simple but effective system for the storage and display of timber, steel or plastic extrusions.**

The system can be either single (1.2m Deep) or double sided (2.4m Deep). The racks are manufactured in 3m modules with a 3m starter bay then 3m extension bays. For example a 9m run would be 1 x Starter and 2 x extension bays.

A standard rack which is 4.2m high is designed to hold lengths of 6m. Other heights are available. The racks are divided into sections with the use of adjustable "D" Hoop dividers. A hook to accommodate safety chains is also provided.

The standard finish of the vertical racking is painted (in a choice of colours) galvanised racking can be provided for outside use

# Standard Shop Shelving

- We welcome all shop shelving requirements, no matter how large or small.
- Most shelving can be delivered within 3 days, or sooner if urgent.
- Silver, grey or jura white paint finishes from stock.
- Call for a quote, to request a site visit or buy online.
- For full shop refits we have a team of 4 development managers based around the UK who will visit your premises and provide a free design & layout service with accompanying CAD drawing.
- Our sales office is open Mon-Fri to deal with any enquiries, and we have an in-house project manager. Whether your budget is £1k or £100k, we will design the scheme that best suits your needs and helps to increase sales.
- As well as stocking shop shelving, we also supply slatwall panels, leaflet dispensers, shop baskets, dump bins and counters & cabinets which means you don't have to order from lots of suppliers.
- We can price separately for our team to come and install, should this be required.

# Four Post Integrated Shop Shelving

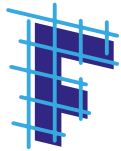

- Four Post, or Integrated shelving is used in conjunction with standard shop shelving.
- The main feature of this type racking is that the area above the shop shelving is not lost, and can be used as storage for stock, or to display heavy or bulky items.
- The benefits to using this system over traditional shelving alone include:
  - The over bay storage means that the need for "back room" space for storage is greatly reduced
  - It aids stock replenishment as the backup stock is stored directly above
  - It maximises customer impact when well stocked, and gives the appearance of holding vast quantities of stock
  - It enables the display of large items such as white goods, wheelbarrows etc
  - The racking can be painted any colour to match the company colour scheme. Choose from either lightweight longspan style shelving, or heavy duty pallet racking which will take up to 2000kg per level.

## Installation

- ✓ All our fitters are SEIRS registered, competent & professional.
- ✓ We can provide a separate price for installation at the same time as we quote for the equipment.
- ✓ A merchandising service for shop shelving is also available, please ask for details.
