

RAF-IBL-25 DOSAGE STATION

Optional Equipment – Part of Raf-BL Brine Mixing System

DESCRIPTION

The Raf-IBL-25 dosage station is a complement to the RAF-BL Mixing System designed to distribute doses of a defoaming agent into the injection machine mixture. The use of additives can be recorded in database in the Raf-SpGraf registration system,

The system does not mix the additive, it emits doses of a defoaming agent from a 25 L container into the injection machine mixture.

ADVANTAGES OF DOSAGE STATION

- Easy to clean
- Precise dosing of additives
- Adjustable additive doses for the brine mixture
- Recording of all additives used available.

ASSOCIATED EQUIPMENT

- Mixing System Raf – BL
- Injection Machine Raf – S900
