

RAF-S900-K COOLING SYSTEM

Optional Equipment – For Injection Machine Raf-S900

DESCRIPTION

The cooling system Raf-S900-K is an optional equipment used with the injection machine Raf-S900 to cool the injection liquid used. The cooling system is connected to a filter with a dual layer body. The cooling system circulates the coolant through the dual layer of the filter cooling the liquid. This way of cooling ensures easy cleaning of equipment. The cooling system is fully controlled by the injection machine.

ADVANTAGES OF THE COOLING SYSTEM

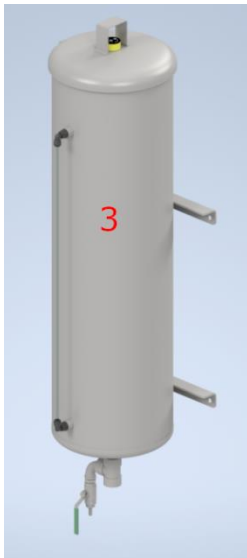

- Keeps the liquid around 1-3C°
- Easy to clean

COOLING SYSTEM RAF-S900K

The cooling system consists of:

1. Refrigeration compressor
 - a. Control cabinet
 - b. Cooling compressor
 - c. Coolant circulation pump
2. Dual layer filter
3. Coolant reserve tank

ASSOCIATED EQUIPMENT

The Raf-S900-K cooling system is part of the optional equipment available for Raf-S900 injection machine.
