

TIPS TO START YOUR PLANTS OFF RIGHT

We make every effort to ship our plants when they are the healthiest but they've just been through a lot! Here's a few tips to help your plants recover & thrive. ♡

• CHECK VITAL SIGNS

ALSO REMOVE NEWSPAPER

- *Does the soil feel damp? If not, water that sucker*
- *Any wilting?*
- *Any bent or broken stems? Email us if you're worried*

This is a great time to take a photo of your plant. This is handy if they start to go downhill and you want to email us with questions or maybe you just want to crow about your sweet new plants to all your friends on the 'gram. Shameless plug: @gkplants *jazz hands*

• KEEP YOUR PLANTS IN DEEP SHADE FOR THE 1ST WEEK

SHADE CLOTH ALSO OK

Your plants have just come from a climate-controlled greenhouse & need to adjust to the stronger UV rays outdoors.

This cannot be done indoors!

Science! After about a week the plant's photoreceptors have adapted & made sunscreen to deal with the higher UV outside

• DO NOT TRANSPLANT UNTIL YOUR PLANT PUSHES NEW GROWTH

PROBABLY SEVERAL WEEKS

This is a sign it has recovered from the transport & has adjusted to its new conditions. See the culture sheet or our online FAQ for soil recommendations.

MONITOR YOUR NEW PLANTS CAREFULLY FOR SIGNS OF STRESS

- *wilting*
- *discoloration*
- *leaf drop*
