Rust Coater

AgriGuard Rust Coater products are specially engineered polymer products specifically designed to coat over and encapsulate rust and corrosion on weathered metal bonding the rust to the metal to prevent any corrosive material from permeating through to the metal substrate to continue causing rust to spread while revitalizing the part or structure to endure many more years of useful protected life. Many products claim to stop rust but nothings can stop rust permanently like AGRIGUARD RUST COATER.

Water Borne Acrylic Polyurethane Enamel

A specially formulated high performance water reducible finish coat designed to provide a durable long lasting protective coating for equipment in a Farm and Agricultural environment. This water reducible acrylic coating offers very low VOC, no fire hazard and is non-polluting.

Water Reducible Epoxy Primer

A high performance water reducible primer designed to provide corrosion protection for equipment in a Farm and Agricultural environment. This water reducible acrylic coating offers very low VOC, no fire hazard and is non-polluting.

Industrial and Implement Aerosol Enamel

A specially formulated high performance acrylic enamel designed to provide a durable long lasting protective coating for equipment in a Farm and Agricultural environment. This product offers a flexible high gloss finish that provides outstanding color and gloss retention. Used as a topcoat over the AgriGuard Rust Coater, it can provide years of protection and beauty to restored equipment. It is made available in the convenient and economical aerosol container. Lead and chromate free. Contains no methylene chloride or chlorofluorocarbons.
