The E9 MOLLE tactical vest is a flexible and reliable utility vest containing our highly advanced, proprietary harness system. This updated design is aimed at improving posture and reducing vest movement during use (Pat pending).

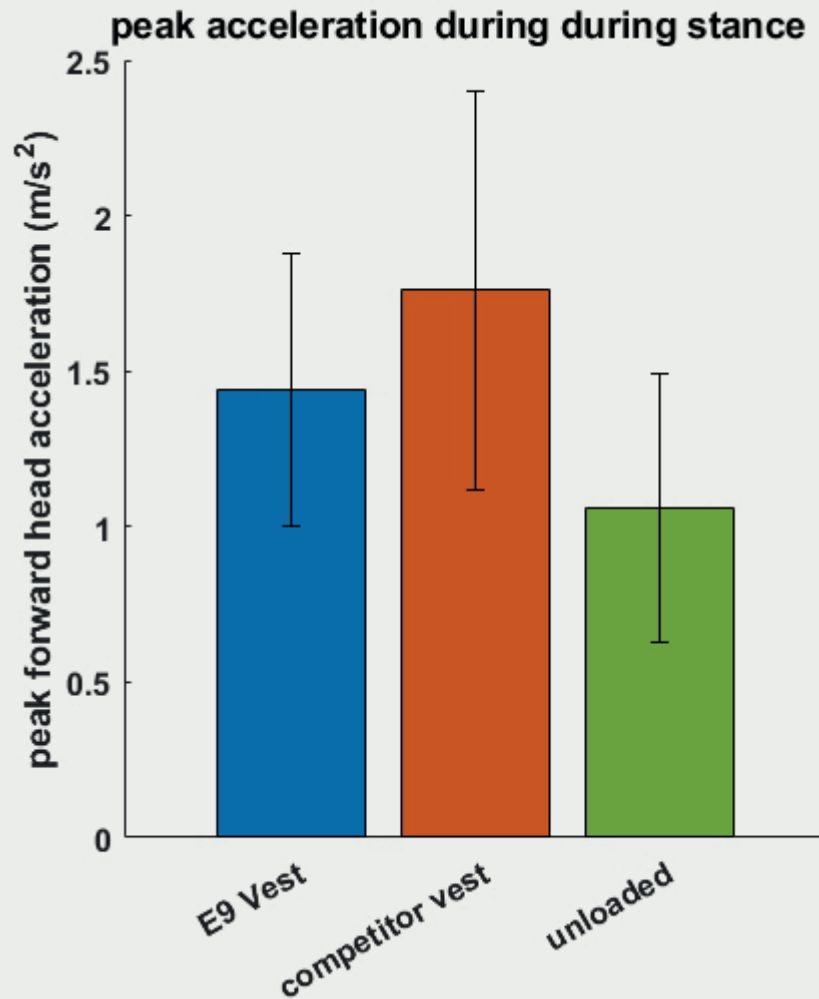

It has been developed and tested with scientists at Lincoln University and the unrivaled consultation and feedback, from law enforcement operators.

- Fully adjustable internal harness system
- Durable, lightweight and breathable Mesh
- Cushioned 3D spacer mesh back panel
- PALS front panels, for use with MOLLE pouches
- Large front zipped document pockets
- Military grade zippers, webbing and trim
- Shoulder epaulettes

100% Polyester Mesh

SIZES:
XS - XXL

LENGTHS:
SHORT, REGULAR, TALL

- Loaded tactical vests have been shown to increase head accelerations potentially leading to neck and back injuries
- Our proprietary harness system has been shown in studies to reduce this head acceleration by 46% on average when compared with the equivalent unharnessed vest (Fig 1)
- Vest movement away from the torso is also an issue when using a tactical vest whilst running, our new harness system can reduce the movement of the vest away from the torso by up to 15%
