

BEAM STANCHIONS

P-00039-1

P-00041-10

P-00041-1

P-00147-60

P-00149-3

Temporary horizontal lifelines consist of 42" high, lightweight, low profile quick set-up stanchions for workers needing protection accessing steel and concrete beams. Each system includes a 60' adjustable engineered horizontal lifeline cable assembly that is connected between two stanchions, providing fall protection for up to 2 workers conducting road and bridge building activities. Multiple Temporary horizontal lifelines can be installed directly next to each other allowing for greater overall span lengths, if needed. Workers using a 100% "Y" style lanyard have continuous fall protection between systems.

Temporary horizontal lifelines work on I-Beams from 8"-22" wide, with 1/2" - 2 1/4" thick flanges. Additional stanchions with by-pass cable adaptors may be added to any system where limited clear fall exists.

Meets OSHA 1926.500.

Part #	Part Name
P-00039-1	In-Line Shock Absorber
P-00041-1	MD Post for Steel I-Beams
P-00041-10	MD Post for Concrete Beams
P-00147-60	Horizontal Lifeline Cable Assembly
P-00149-3	Intermediate By-Pass Adaptor
